Source: U.S. Census Bureau, Small Area Income & Poverty Estimates, <http://www.census.gov/did/www/saipe/index.html>

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

Source: U.S. Census Bureau, Small Area Income & Poverty Estimates, <http://www.census.gov/did/www/saipe/index.html>

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

Source: U.S. Census Bureau, Small Area Income & Poverty Estimates, <http://www.census.gov/did/www/saipe/index.html>

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

...2006 median household income in 2013 dollars																			\$42,024		
Percent change 2006-2013 adjusted for inflation																			(9.7)%		

Source: U.S. Census Bureau, Small Area Income & Poverty Estimates, <http://www.census.gov/did/www/saie/index.html>

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

Source: U.S. Census Bureau, Small Area Income & Poverty Estimates, <http://www.census.gov/did/www/saipe/index.html>

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

Source: U.S. Census Bureau, Small Area Income & Poverty Estimates, <http://www.census.gov/did/www/saipe/index.html>

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

Source: U.S. Census Bureau, Small Area Income & Poverty Estimates, <http://www.census.gov/did/www/saipe/index.html>

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

Source: U.S. Census Bureau, Small Area Income & Poverty Estimates, <http://www.census.gov/did/www/saipe/index.html>

"Lower Bound" refers to the 90% confidence interval lower boundary. "Upper Bound" refers to the 90% confidence level upper boundary. Since these are estimates, standard statistical rules apply.

The Bureau of Labor Statistics' Consumer Price Index (CPI-U-RS) is 201.6 for 2006 and 232.957 for 2013. Thus the factor to adjust 2006 income to 2013 constant dollars is 232.957/201.6, or 1.155541.

## In this section

- About SAIFE
- [Frequently Asked Questions](#)

## About SAIFE

The U.S. Census Bureau's Small Area Income and Poverty Estimates (SAIFE) program provides annual estimates of income and poverty statistics for all school districts, counties, and states. The main objective of this program is to provide estimates of income and poverty for the administration of federal programs and the allocation of federal funds to local jurisdictions. In addition to these federal programs, state and local programs use the income and poverty estimates for distributing funds and managing programs.

The SAIFE program produces the following county and state estimates:

- total number of people in poverty
- number of children under age 5 in poverty (for states only)
- number of related children ages 5 to 17 in families in poverty
- number of children under age 18 in poverty
- median household income

In addition, in order to implement provisions under Title I of the Elementary and Secondary Education Act as amended, we produce the following estimates for school districts:

- total population
- number of children ages 5 to 17
- number of related children ages 5 to 17 in families in poverty

The estimates are not direct counts from enumerations or administrative records, nor direct estimates from sample surveys. Instead, for counties and states, we model income and poverty estimates by combining survey data with population estimates and administrative records. For school districts, we use the model-based county estimates and inputs from federal tax information and multi-year survey data to produce estimates of poverty. See the [Methodology](#) page for further details on the models and see [Information about Data Inputs](#) for details on the data sources.

Beginning with the SAIFE program's estimates for 2005, data from the [American Community Survey](#) (ACS) are used in the estimation procedure; all prior years used data from the Annual Social and Economic Supplements of the [Current Population Survey](#). Further details are given in a 2007 SAIFE report, [Use of ACS Data to Produce SAIFE Model-Based Estimates of Poverty for Counties](#) [PDF - 3.4M].

The U.S. Census Bureau, with support from other Federal agencies, originally created the SAIFE program to provide more current estimates of selected income and poverty statistics than the most recent decennial census. A brief history of the SAIFE program can be found on the [Origins of the Project](#) page. Prior to the creation of the SAIFE program the decennial census was the only source of income distribution and poverty statistics for households, families, and individuals if one needed data for "small" geographic areas, e.g., counties, cities, and other substate areas. The ten-year span between the release of decennial census data left a large gap in information concerning [fluctuations in the economic situation](#) [PDF - 191K] of the nation and local areas.

Single-year direct survey ACS estimates are annually available for counties and other areas with population size of 65,000 or more. Three-year ACS estimates are annually available for areas with population size of 20,000 or more. Five-year ACS estimates are annually available for all counties and school districts, as well as for other small geographic areas (e.g., census tracts). Since modeling produces estimates with reduced sampling error, the SAIFE program continues to annually produce single-year model-based estimates for all school districts, counties, and states.

[Main](#)

[About SAIPE](#)

[Data](#)

[Methodology](#)

[Publications](#)

[Related Sites](#)

[Contact Us](#)

## SAIPE Methodology

SAIPE revises and improves our methodology as time and resources allow. The details of the methodology differ slightly from year to year. The most significant change was between 2004 and 2005, when SAIPE began using data from the American Community Survey, rather than from the Annual Social and Economic Supplement to the Current Population Survey.

The SAIPE model has two distinct components:

- state and county estimates, and
- school district estimates.

School district estimates sum to county estimates, county estimates sum to state estimates, and state estimates sum to the national estimate.

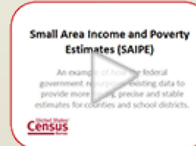

More on SAIPE Methodology:
