Traverse Transportation Coordinating Initiative (TTCI)

The mission of the Traverse Transportation Coordinating Initiative (TTCI) is to provide coordinated leadership and direction for the development and conduct of the continuing, cooperative & comprehensive transportation planning process for the Traverse City urban area.

TTCI Policy Board Meeting

Tuesday, November 12th, 2024 at 3:00 pm

1209 S Garfield Avenue Suite C, Traverse City, MI or Via Zoom

DRAFT - MEETING MINUTES - DRAFT

Call to Order
Chair Friend called the meeting to order at 3:05 pm on Tuesday, November 12, 2024.

1. **Roll Call of Voting Members**

   Voice introduction of membership was accepted as roll call.

   Present:
   Chuck Korn (Garfield Twp.); Beth Friend (East Bay Twp); Kelly Dunham (BATA); Brendan Mullane (LCRC); Doug White (Acme Twp); Richard Bayus (MDOT); Nicole Blonshine (Blair Twp.); Wayne Schoonover (Ohm Advisors); Midge Werner (Bingham Twp); Jeff Shaw (Elmwood Twp); Ron Lemcool (Long Lake Twp.); Elizabeth Vogel (City of Traverse City); Jim O'Rourke (Leelanau County); Andy Marek (Green Lake Twp.)
   Others present:
   Barry Hicks (NN); Isha Pithwa (NN); Emma Kelly (NN); Shaughn Handley (BATA); Bob Nelson (Cherry Capital Airport)
   Online:
   Dan Wagner (MDOT);

2. **Approval of Agenda and Minutes**

   The agenda was reviewed and approved with minor adjustments, including accommodating a presenter's availability and adding the Performance Tracking presentation by MDOT as item 4b, shifting subsequent items accordingly.

   Motion: Shaw moved, supported by White, to approve the meeting agenda with the addition of item 4d, 2025 Performance Tracking Targets, and the approval of the minutes of September 10, 2024. Outcome: The motion was approved unanimously by a voice vote.

3. **Public comment**

   The floor was open for public comment; no comments were made.

4. New Business

a) Travel Demand Modeling

The presenter was unavailable when the item was called, so the board proceeded with the agenda, intending to revisit the item later.

b) NFC Revision for Frankie Road

Request to reclassify Franke Road from a local road to either a minor or major collector, based on traffic counts and its connectivity to higher volume roads like Silver Lake Road and US-31.

Discussion:
The reclassification could potentially make Franke Road eligible for additional funding through Act 51.

The Board made two requests:

1. Staff from the Grand Traverse County Road Commission attend the next meeting and discuss their process for selecting Franke Road and how it compares to other roads in the county.

2. MDOT provide information on the 10-year review process for NFC reclassification and how this request fits into the larger process.

<u>Motion 1:</u> A motion was made by Friend and supported by Werner to request additional information from the Road Commission before proceeding to final review.
Vote:
- *In Favor: Friend and Werner.*
- *Opposed: Bayus, Marek, Shaw, O'Rourke, Blonshine, Lemcool, Vogel, Mullane, Dunham, Korn, and White.*

Outcome: The motion failed by majority by a roll-call vote.

<u>Motion 2:</u> A motion was made by Merek and supported by Vogel to approve the request to reclassify the NFC of Franke Road.
Vote:
- *In Favor: Bayus, Marek, Shaw, O'Rourke, Blonshine, Lemcool, Vogel, Mullane, Dunham, Korn, and White.*
- *Opposed: Friend and Werner.*

Outcome: The motion passed by majority by a roll-call vote.

c) 2025 Safety Targets

Hicks presented the 2025 safety targets, noting that MPOs typically adopt statewide safety performance measures.

<u>Motion:</u> Shaw moved, supported by Marek, to adopt the statewide safety targets as recommended by the Technical Committee and MDOT.

Outcome: The motion passed unanimously by a voice vote.

d) 2025 Performance Tracking Document

Bayus presented the performance tracking document for 2025, which focuses on road and pavement conditions. The document is intended to help guide project selection.

Motion: Lemcool moved, supported by Blonshine, to support the 2025 performance tracking document.
Outcome: The motion passed unanimously by a voice vote.

e) Discussion on TIP Project Submission (2026-2029)

Hicks Outlined the process for submitting projects for the 2026-2029 Transportation Improvement Program (TIP). The deadline for project submissions was set for December 6, and a review will take place at the December 19 Technical Committee meeting.

The Board emphasized the need for comprehensive analysis of proposed projects, and engagement with the road commission to ensure proper review and selection.

Item 4a Revisited – Travel Demand Model Data

The presenter was not available to comment on this item. Hicks provided an overview of the request to review and consider the Travel Demand Model (TDM) data explaining its importance for long-range planning and traffic estimation. The Board reviewed the TDM data, The data, including population and employment figures.

Motion: Korn moved, supported by Shaw, to approve the travel demand model data.
Outcome: The motion passed unanimously by a voice vote.

5. Public Comment and Future Agenda Items

The floor was open for public comment; no comments were made.

6. Roundtable Updates/Discussion of future agenda items

None at this time.

7. Next Meeting: The next meeting is scheduled for January 29 at 3:00 PM.

8. Adjournment

Friend Adjourned the meeting at 4:04pm

Traverse Transportation Coordinating Initiative

TTCI

Memorandum

Networks Northwest
Talent / Business / Community

DATE: January 22, 2025

TO: Traverse Transportation Coordinating Initiative Policy Board

FROM: Barry Hicks, AICP, MPO Program Manager

SUBJECT: **FY2026-2029 TIP Project Selection**

The Transportation Improvement Program (TIP) project selection refers to the process of identifying and prioritizing transportation projects that will be funded and implemented over a four-year period in a specific region. The TIP is a key planning document required for areas with a MPO. It ensures that transportation projects align with regional and state transportation plans, are fiscally constrained, and meet federal, state, and local requirements.

Projects must align with the goals and objectives outlined in the region's long-range transportation plan (e.g., improving mobility, safety, sustainability). Because TTCI is a new MPO, there is not an approved long-range plan, also referred to as a Metropolitan Transportation Plan (MTP), at this time. It is anticipated that the inaugural MTP will be completed in 2025. However, TTCI has adopted a policy to help guide the project selection process for their first TIP project selection. The policy is available for review on the Networks Northwest website:

TTCI Application and Instructions for TIP Projects

The FY2026-2029 Call For Projects was issued by the TTCI Policy Board on September 10, 2024. The application deadline was December 6, 2024. All applications have been received and reviewed by the MPO at this time. Staff used the evaluation criteria established in the "TTCI Applications and instructions for TIP Projects" to provide a score on all submitted applications with the exception of transit projects. The application and evaluation criteria predominantly addressed roads and non-motorized transportation as well as collaboration with partnering agencies, economic benefit, and coordination with other projects (such as stormwater management or alignment with complete streets concepts). For this reason, applications from BATA have not been evaluated or scored, but are included with this agenda item for consideration.

Presentation and Review of Projects

The Technical Committee was tasked with reviewing each project to determine which should be included in the FY2026-2029 TIP and assigning each selected project to a specific year for MPO funding. Each applicant was given the opportunity to present their projects to the committee and answer questions prior to project selection. For the results of this process, please see the attached "FY26-29 TIP Project Prioritization" spreadsheet.

Project Scoring

The scoring worksheets for each project provide a potential scoring range based on the approved criteria for project selection. While staff has made every effort to assign scores that accurately reflect these criteria, the policy requires that certain selection scoring elements be reviewed by the TTCI Technical Committee and Policy Board.

Additionally, some variability in the quantitative scoring matrix has arisen due to discrepancies between the information submitted in applications and staff findings. These discrepancies will be addressed as the respective applications are presented for discussion.

Consideration of Evaluation and Scoring Alternatives

Both the Technical Committee and Policy Board have expressed interest in revising the project selection criteria but acknowledge that completing this process may require more time than is available for the current TIP cycle. The selection criteria that are currently in place was revied by both groups and approved for the current TIP cycle.

The following are suggestions drafted by staff for consideration. They are not intended to be used throughout the selection process nor are they intended to be in conflict with the current established criteria.

The FHWA planning principles requires that the planning process follow the "Three C's" – Continuing, Comprehensive, and Cooperative.

- Continuing - The planning process must be ongoing and iterative, addressing both current and future transportation needs.
- Cooperative - The planning process must involve collaboration among all stakeholders, including federal, state, regional, and local governments, as well as the public and private sectors.
- Comprehensive - The planning process must consider all modes of transportation and their interconnections, as well as the economic, social, and environmental impacts of transportation decisions.

Through staff's engagement with local agency goals for the MPO program and alignment with FHWA principles, the following objectives have consistently emerged and are listed in no specific order:

- Matching Funds/Cost Sharing – projects that can draw from multiple financial resources to stretch dollars and maximize project investment. May include reducing construction costs by coupling multiple projects (such as stormwater management in coordination with a road reconstruction).
- Collaboration – multiple agencies involved at multiple levels (local, state, non-profit, etc.)
- Complete Streets – design incorporates transportation methods for all.
- Non-Motorized Transportation – trails and connectivity to more community resources.
- Connectivity to Public Transportation – access to transportation for persons of all ages and abilities.
- Safety – reduction in accidents through transportation network improvements and technology.

Some of these objectives can be difficult to quantify in a qualitative manner but are worth further thought to include in future revisions to the project selection criteria.

Action Requested:

- Review and discussion of FY26-29 TIP projects.
- Each applicant will present projects and answer questions/receive feedback from the committee.
- Review Technical Committee's Recommended Project Prioritization and select projects by fiscal year.
- Motion(s) – One of two actions requested:
    - If project selection is not agreed upon and completed at this meeting, then no motion is needed. There would be a continuation of the project selection on February 26, 2029.
    - If project selection is completed at this meeting, then the recommended motion is: Approve the FY26-29 TIP projects (additional language if applicable: "as recommended by the Technical Committee.").

Traverse Transportation Coordinating Initiative (TTCI)
Metropolitan Planning Organization (MPO)
PROJECT/PROGRAM NOMINATION FORM

Transit agency legal name: Grand Traverse County Road Commission

Agency contact person: Derek Weichlein

Proposed project: Cass Road

Local agency project rank: 1

Fiscal year funding is requested: 2026 Proposed let date: 12/2025

Major route: Cass Rd

Project limits: Hartman Rd to S. Airport Rd

Length (in mi.): 1.25 ■ Project area map attached?

Project description: Crush and shape, add center turn lane, traffic signal modernization

Project Conditions

PASER rating: 2 Remaining Service Life (RSL): -18 years

Is this project 100% preserve? ☐ Yes ■ No

Is this a preventative maintenance project? ☐ Yes ■ No

☐ Please attach a description of the preventative maintenance fix(es) since the last reconstruction. Describe the fix(es) and include the year the fix(es) was/were completed.

Does this project have a capacity change? ■ Yes ☐ No
If yes, please attach travel analysis in pdf format.

Traffic Volume (AADT): 7112 Freight Traffic Volume (CAADT): _____

Estimated % Commercial Traffic: 10 On MTP Freight Route? ■ Yes ☐ No

Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route? ■ Yes ☐ No

Functional Class: minor arterial Year of last improvement: unknown

Description of last improvement: unknown

Funding

Federal Non-Participating Work?

☐ Yes ☐ No

Advance Construction Funding?

☐ Yes ■ No

If yes to either question, please explain:

If you have a preferred funding source, check box: ■ STP ☐ CMAQ

Proposed Participating Cost	$ 1500000	Proposed Federal	$ 1000000
Proposed Non-Participating Cost	$	Proposed State	$
Total Project Cost	$ 1500000	Proposed Local	$ 500000

Planning

Project Listed in the TTCI Metropolitan Transportation Plan (MTP)? ■ Yes ☐ No ☐ N/A

Project Identified in Local Plan? ■ Yes ☐ No (If "Yes," please attach pages from plan)

Project Conforms to Complete Streets Policy? ■ Yes ☐ No ☐ N/A

Describe existing and future non-motorized facilities within the project limits/additional comments/exception rational:

5' paved shoulders in accordance with GTCRC complete streets policy

curb ramp upgrades at the Cass/S. Airport intersection

Project located in Environmental Justice Area? ☐ Yes ■ No

If yes, please include the MiEJ Environmental Justic Score:

Please attach a map/screenshot from MiEJScreen Mapping Tool

Safety

Number of crashes per MVMT/MEV: 1.66

Does the project fix the identified correctable safety issues? ■ Yes ☐ No

Describe how the project fixes identified correctable safety issues:

Project includes the addition of a center left turn lane which is a countermeasure to both rear end, angle, and sideswipe opposite crashes that have occurred on this segment.

Assessment

If the answer is "Yes" to any of the following criteria, provide additional explanation in an attachment. Please consider the following factors when completing the work description:

Regional Benefit – Is there a benefit beyond the project to the area wide transportation system or region?	■ Yes ☐ No
Connectivity – Does the project add or enhance a road connection between two or more existing roadways functionally classified as a Major Collector or higher; OR add or enhance connections between two or more pathway corridors or transit routes?	■ Yes ☐ No
Environmental Justice – Is the project located within an identified EJ area and are no adverse impacts projected?	☐ Yes ■ No
Complete Streets – Does the project contain enhancements to serve pedestrians, cyclists, and/or transit users?	■ Yes ☐ No
Transit – Will the project improve service, efficiency, and attractiveness of public transit?	■ Yes ■ No
Green Infrastructure – Does the project involve the use of stormwater best management practices?	■ Yes ☐ No
Environment – Does the project contain elements to preserve, mitigate, or enhance an environmentally sensitive area?	■ Yes ☐ No
Economic Development – Does the project support job creation or growth?	■ Yes ☐ No
Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route?	■ Yes ☐ No
Safety – Can the project be shown to do one or more of the following: reduce fatalities and serious injuries; reduce nonmotorized crashes; enhance transit safety?	■ Yes ☐ No

Narrative

Please attach a narrative for the project and be certain to address the following specific issues:

Local Municipality Infrastructure Coordination: May include projects that cross jurisdictional boundaries, utilize grant funding that must be expended within a limited time-frame, bridge construction or culvert maintenance or replacement, projects being undertaken by public transit agencies or port authorities, rail or freight authorities, non-motorized projects, or projects that may be built concurrently with public utility projects.

Local Planning & Economic Development: Includes projects that are in local or regional plans (such as a Master Plan or other community development related plan) and has a significant impact on the local or regional economy. This may include areas with planned future land uses such that would increase density and traffic volume (high-density commercial, residential, or mixed-use developments).

Additional Information for consideration (if applicable):

- Current number of lanes
- Proposed number of lanes
- Current lane width
- Proposed lane width
- Total crashes on segment in last 3 years
- Drainage problem corrected?
- Replace/new bridge or culvert as part of project?
- Project benefits other modes (wide shoulders, separated nonmotorized facility done as part of project, correct hazardous intersection)

Acronyms/Definitions

AADT (Annual Average Daily Traffic) – Traffic metric that represents the average number of vehicles passing a specific point on a roadway per day over the course of a year.

CAADT (Commercial Annual Average Daily Traffic) – Traffic measurement that specifically tracks the average number of commercial vehicles such as trucks, buses, and delivery vehicles passing a certain point on a roadway per day over the course of a year.

MEV (Million Entering Vehicle) – Quantity of vehicles entering a specific point, location, or area over a given year, expressed in millions.

MiEJ Screen – A mapping tool developed by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) to identify and visualize areas in Michigan facing environmental justice concerns.

MTP (Metropolitan Transportation Plan) – A long-term, strategic document developed by a MPO to guide transportation investments and policies in a metropolitan region over a 20-25 year horizon.

MVMT (Million Vehicle Miles Traveled) – A common way to measure exposure in traffic safety. Crash rates are often expressed as crashes per million vehicle miles traveled.

RSL (Remaining Service Life) – Measure used to estimate the amount of time a roadway, bridge, or other infrastructure component will continue to perform its intended function before requiring significant rehabilitation, reconstruction, or replacement.

TTCI

FY 2026 Project Nomination

Grand Traverse County Road Commission

Cass Rd: Hartman Rd to S. Airport Rd

Project will consist of crushing and shaping the existing roadway surface, correcting base issues, guardrail upgrades, driveway approaches, drainage improvements and pavement markings on Cass Rd from Hartman Road to S. Airport Rd. A center left turn lane will also be added from S. Airport Rd to Hartman Road due to driveway density and as a countermeasure to the crashes that have occurred on this segment, this will expand the current roadway from two, 11' lanes to three 11' lanes. The traffic signal at the intersection of Cass and S. Airport Road will also be modernized a new lane configuration will also enable the existing split phasing to be removed improving efficiency on the S. Airport Road corridor.

Summary of Crash Statistics

Grand Traverse (County)

Report Module: Safety Management Analysis

Today's Date: Thursday, September 12, 2024

Dates: 01/01/2019 to 12/31/2023

Animal Crashes: Excluded

Criteria:

Start Date >= 01/01/2019
End Date <= 12/31/2023

NOTE: For most of the categories, a crash may be counted in only one of the option items. For example, in the CRASHES BY DAY OF THE WEEK category, a crash may be counted in the total of only one day (the option item); i.e.-- a crash counted in the total for Monday is not counted in the totals for any of the other days. There are two exceptions to this rule: for the CRASHES BY INVOLVEMENT and CRASHES BY DRIVER VIOLATION categories a crash may be counted in more than one of the option items. For example, a crash may involve Drinking, Deer, and Fleeing Situation; in the CRASHES BY INVOLVEMENT category this crash would be counted in the totals of three of the option items (Drinking, Deer, and Fleeing Situation).

Also, the percentages listed in parenthesis are a representation of the total crashes for each option item as a percent of the TOTAL NUMBER OF CRASHES in the selected date range. The percentages listed after each Fatal + A-type option item total in the CRASHES BY DRIVER VIOLATION category are an exception; these percentages represent the total Fatal and A-type Injury crashes as a percentage of the Driver Violation option item total that they follow (and are grouped with, as indicated by the horizontal dividing lines).

Project: Franke Rd. (US-31 to Silver Lake Rd.)
Agency: Grand Traverse County Road Commission
Federal Aid Eligible: Not at this time; Franke Rd. is in process of being added to the NHS

Factor	Actual / Description	Score	Comment
1) Local Coordination	Potential to improve existing trail and expand trail network in the area	5	Potential Partnership with TART, Garfield Township, and Joint Rec Authority (Potential +/- 5 pts)
2) Economic Development	Yes	5	
	Actual PASER Rating		
3) PASER - Pavement Condition	N/A	5	Not rated as part of NHS or non-NHS; pavement would likely score PASER rating of 2
	Actual AADT		
4) Average Traffic Count	3,580	1	*based off traffic study conducted by county in 2024
	Actual CAADT		
5) Average Freight Traffic Count	N/A	0	*no counts due to status as non-NHS
	Actual RSL		
6) Remaining Service Life	0	10	
7) Environmental Justice	MiEJ Score: > 10-20	2	Source: MiEJ
	Actual MVMT		
8 – A) MVMT	3.5	10	
8 – B) Area of Safety concern	Yes	5	
	Actual NFC		
9) National Road Classification	N/A	7	Not currently classified on NHS system; could be classifiedas Major Collector
	Description		
10 – A) Traffic Control Measures	Yes	2	
10 – B) Increase Presence	Yes	2	
10 – C) Public Transit Element	N/A	0	Potential +1 pts

Project Total Score: range 54-65

Traverse Transportation Coordinating Initiative (TTCI)
Metropolitan Planning Organization (MPO)
PROJECT/PROGRAM NOMINATION FORM

Transit agency legal name: Grand Traverse County Road Commission

Agency contact person: Derek Weichlein

Proposed project: Franke Rd

Local agency project rank: 2

Fiscal year funding is requested: 2027 Proposed let date: 5/2026

Major route: Franke Rd

Project limits: US-31 to Silver Lake Rd

Length (in mi.): 0.5 ■ Project area map attached?

Project description: Crush and Shape

Project Conditions

PASER rating: 2 Remaining Service Life (RSL): -7 years

Is this project 100% preserve? ☐ Yes ■ No

Is this a preventative maintenance project? ☐ Yes ■ No

☐ Please attach a description of the preventative maintenance fix(es) since the last reconstruction. Describe the fix(es) and include the year the fix(es) was/were completed.

Does this project have a capacity change? ☐ Yes ■ No
If yes, please attach travel analysis in pdf format.

Traffic Volume (AADT): 8,149 Freight Traffic Volume (CAADT): _____

Estimated % Commercial Traffic: 10 On MTP Freight Route? ■ Yes ☐ No

Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route? ■ Yes ☐ No

Functional Class: proposed minor collector Year of last improvement: unknown

Description of last improvement: _____

Funding

Federal Non-Participating Work?

☐ Yes ☐ No

Advance Construction Funding?

☒ Yes ☐ No

If yes to either question, please explain: 2027 Funds to be used in 2026

If you have a preferred funding source, check box: ☒ STP ☐ CMAQ

Proposed Participating Cost	$ 1,500,000	Proposed Federal	$ 1,000,000
Proposed Non-Participating Cost	$	Proposed State	$
Total Project Cost	$ 1,500,000	Proposed Local	$ 500,000

Planning

Project Listed in the TTCI Metropolitan Transportation Plan (MTP)? ☒ Yes ☐ No ☐ N/A

Project Identified in Local Plan? ☒ Yes ☐ No (If "Yes," please attach pages from plan)

Project Conforms to Complete Streets Policy? ☒ Yes ☐ No ☐ N/A

Describe existing and future non-motorized facilities within the project limits/additional comments/exception rational:

Project is adjacent to Buffalo Ridge Trail, trail could possibly be continued to connect to the Mall Trail in conjunction with this project

Project located in Environmental Justice Area? ☐ Yes ☒ No

If yes, please include the MiEJ Environmental Justic Score: _____

Please attach a map/screenshot from MiEJScreen Mapping Tool

Safety

Number of crashes per MVMT/MEV: 3.5

Does the project fix the identified correctable safety issues? ■ Yes ☐ No

Describe how the project fixes identified correctable safety issues:

Addition of recessed wet reflective pavement markings

Assessment

If the answer is "Yes" to any of the following criteria, provide additional explanation in an attachment. Please consider the following factors when completing the work description:

Regional Benefit – Is there a benefit beyond the project to the area wide transportation system or region?	■ Yes ☐ No
Connectivity – Does the project add or enhance a road connection between two or more existing roadways functionally classified as a Major Collector or higher; OR add or enhance connections between two or more pathway corridors or transit routes?	■ Yes ☐ No
Environmental Justice – Is the project located within an identified EJ area and are no adverse impacts projected?	☐ Yes ■ No
Complete Streets – Does the project contain enhancements to serve pedestrians, cyclists, and/or transit users?	■ Yes ☐ No
Transit – Will the project improve service, efficiency, and attractiveness of public transit?	■ Yes ■ No
Green Infrastructure – Does the project involve the use of stormwater best management practices?	■ Yes ☐ No
Environment – Does the project contain elements to preserve, mitigate, or enhance an environmentally sensitive area?	■ Yes ☐ No
Economic Development – Does the project support job creation or growth?	■ Yes ☐ No
Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route?	■ Yes ☐ No
Safety – Can the project be shown to do one or more of the following: reduce fatalities and serious injuries; reduce nonmotorized crashes; enhance transit safety?	■ Yes ☐ No

Narrative

Please attach a narrative for the project and be certain to address the following specific issues:

Local Municipality Infrastructure Coordination: May include projects that cross jurisdictional boundaries, utilize grant funding that must be expended within a limited time-frame, bridge construction or culvert maintenance or replacement, projects being undertaken by public transit agencies or port authorities, rail or freight authorities, non-motorized projects, or projects that may be built concurrently with public utility projects.

Local Planning & Economic Development: Includes projects that are in local or regional plans (such as a Master Plan or other community development related plan) and has a significant impact on the local or regional economy. This may include areas with planned future land uses such that would increase density and traffic volume (high-density commercial, residential, or mixed-use developments).

Additional Information for consideration (if applicable):

- Current number of lanes
- Proposed number of lanes
- Current lane width
- Proposed lane width
- Total crashes on segment in last 3 years
- Drainage problem corrected?
- Replace/new bridge or culvert as part of project?
- Project benefits other modes (wide shoulders, separated nonmotorized facility done as part of project, correct hazardous intersection)

Acronyms/Definitions

AADT (Annual Average Daily Traffic) – Traffic metric that represents the average number of vehicles passing a specific point on a roadway per day over the course of a year.

CAADT (Commercial Annual Average Daily Traffic) – Traffic measurement that specifically tracks the average number of commercial vehicles such as trucks, buses, and delivery vehicles passing a certain point on a roadway per day over the course of a year.

MEV (Million Entering Vehicle) – Quantity of vehicles entering a specific point, location, or area over a given year, expressed in millions.

MiEJ Screen – A mapping tool developed by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) to identify and visualize areas in Michigan facing environmental justice concerns.

MTP (Metropolitan Transportation Plan) – A long-term, strategic document developed by a MPO to guide transportation investments and policies in a metropolitan region over a 20-25 year horizon.

MVMT (Million Vehicle Miles Traveled) – A common way to measure exposure in traffic safety. Crash rates are often expressed as crashes per million vehicle miles traveled.

RSL (Remaining Service Life) – Measure used to estimate the amount of time a roadway, bridge, or other infrastructure component will continue to perform its intended function before requiring significant rehabilitation, reconstruction, or replacement.

TTCI

FY 2027 Project Nomination

Grand Traverse County Road Commission

Franke Rd: Silver Lake Rd to US-31

Project will consist of crushing and shaping the existing roadway surface, correcting base issues, guardrail upgrades, driveway approaches, drainage improvements and pavement markings on Franke Rd from Silver Lake Road to US-31/M-37. Improvements for pedestrian facilities at the TCAPS Montessori School will be considered such as adding a pedestrian refuge island and mid block pedestrian crossing. Roadway would also feature wet reflective pavement markings. The roadway will maintain its existing cross section with (3) 11’ lanes, one lane in each direction with a center left turn lane.

Summary of Crash Statistics

Grand Traverse (County)

Report Module: Safety Management Analysis

Today's Date: Monday, November 18, 2024

Dates: 01/01/2019 to 12/31/2023

Animal Crashes: Excluded

Criteria:

Start Date >= 01/01/2019
End Date <= 12/31/2023

NOTE: For most of the categories, a crash may be counted in only one of the option items. For example, in the CRASHES BY DAY OF THE WEEK category, a crash may be counted in the total of only one day (the option item); i.e.-- a crash counted in the total for Monday is not counted in the totals for any of the other days. There are two exceptions to this rule: for the CRASHES BY INVOLVEMENT and CRASHES BY DRIVER VIOLATION categories a crash may be counted in more than one of the option items. For example, a crash may involve Drinking, Deer, and Fleeing Situation; in the CRASHES BY INVOLVEMENT category this crash would be counted in the totals of three of the option items (Drinking, Deer, and Fleeing Situation).

Also, the percentages listed in parenthesis are a representation of the total crashes for each option item as a percent of the TOTAL NUMBER OF CRASHES in the selected date range. The percentages listed after each Fatal + A-type option item total in the CRASHES BY DRIVER VIOLATION category are an exception; these percentages represent the total Fatal and A-type Injury crashes as a percentage of the Driver Violation option item total that they follow (and are grouped with, as indicated by the horizontal dividing lines).

10 – C) Public Transit Element	N/A	N/A	Potential +1 pts

Project Total Score: range 50-61

Traverse Transportation Coordinating Initiative (TTCI)
Metropolitan Planning Organization (MPO)
PROJECT/PROGRAM NOMINATION FORM

Transit agency legal name: Grand Traverse County Road Commission

Agency contact person: Derek Weichlein

Proposed project: S. Airport Road

Local agency project rank: 3

Fiscal year funding is requested: 2028 Proposed let date: 12/2027

Major route: S. Airport Rd

Project limits: Townline Rd to Three Mile Rd

Length (in mi.): .9 ☒ Project area map attached?

Project description: Crush and shape, add center turn lane

Project Conditions

PASER rating: 2 Remaining Service Life (RSL): -7 years

Is this project 100% preserve? ☐ Yes ☒ No

Is this a preventative maintenance project? ☐ Yes ☒ No

☐ Please attach a description of the preventative maintenance fix(es) since the last reconstruction. Describe the fix(es) and include the year the fix(es) was/were completed.

Does this project have a capacity change? ☒ Yes ☐ No
If yes, please attach travel analysis in pdf format.

Traffic Volume (AADT): 13482 Freight Traffic Volume (CAADT): _____

Estimated % Commercial Traffic: 10 On MTP Freight Route? ☒ Yes ☐ No

Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route? ☒ Yes ☐ No

Functional Class: minor arterial Year of last improvement: unknown

Description of last improvement: unknown

Funding

Federal Non-Participating Work?

☐ Yes ☐ No

Advance Construction Funding?

☐ Yes ■ No

If yes to either question, please explain: _____

If you have a preferred funding source, check box: ■ STP ☐ CMAQ

Proposed Participating Cost	$ 1500000	Proposed Federal	$ 1000000
Proposed Non-Participating Cost	$	Proposed State	$
Total Project Cost	$ 1500000	Proposed Local	$ 500000

Planning

Project Listed in the TTCI Metropolitan Transportation Plan (MTP)? ■ Yes ☐ No ☐ N/A

Project Identified in Local Plan? ■ Yes ☐ No (If "Yes," please attach pages from plan)

Project Conforms to Complete Streets Policy? ■ Yes ☐ No ☐ N/A

Describe existing and future non-motorized facilities within the project limits/additional comments/exception rational:

East Bay Township/TART trails is pursuing funds to complete the non motorized path from Townline Rd to Three Mile Rd. If funds are available path would be completed concurrently with road construction, curb Ramp upgrades at signalized intersections

Project located in Environmental Justice Area? ☐ Yes ■ No

If yes, please include the MiEJ Environmental Justic Score: _____

Please attach a map/screenshot from MiEJScreen Mapping Tool

Safety

Number of crashes per MVMT/MEV: 2.30

Does the project fix the identified correctable safety issues? ■ Yes ☐ No

Describe how the project fixes identified correctable safety issues:

Project includes the addition of a center left turn lane which is a countermeasure to both rear end, angle, and sideswipe opposite crashes that have occurred on this segment.

Assessment

If the answer is "Yes" to any of the following criteria, provide additional explanation in an attachment. Please consider the following factors when completing the work description:

Regional Benefit – Is there a benefit beyond the project to the area wide transportation system or region?	■ Yes ☐ No
Connectivity – Does the project add or enhance a road connection between two or more existing roadways functionally classified as a Major Collector or higher; OR add or enhance connections between two or more pathway corridors or transit routes?	■ Yes ☐ No
Environmental Justice – Is the project located within an identified EJ area and are no adverse impacts projected?	☐ Yes ■ No
Complete Streets – Does the project contain enhancements to serve pedestrians, cyclists, and/or transit users?	■ Yes ☐ No
Transit – Will the project improve service, efficiency, and attractiveness of public transit?	■ Yes ■ No
Green Infrastructure – Does the project involve the use of stormwater best management practices?	■ Yes ☐ No
Environment – Does the project contain elements to preserve, mitigate, or enhance an environmentally sensitive area?	■ Yes ☐ No
Economic Development – Does the project support job creation or growth?	■ Yes ☐ No
Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route?	■ Yes ☐ No
Safety – Can the project be shown to do one or more of the following: reduce fatalities and serious injuries; reduce nonmotorized crashes; enhance transit safety?	■ Yes ☐ No

Narrative

Please attach a narrative for the project and be certain to address the following specific issues:

Local Municipality Infrastructure Coordination: May include projects that cross jurisdictional boundaries, utilize grant funding that must be expended within a limited time-frame, bridge construction or culvert maintenance or replacement, projects being undertaken by public transit agencies or port authorities, rail or freight authorities, non-motorized projects, or projects that may be built concurrently with public utility projects.

Local Planning & Economic Development: Includes projects that are in local or regional plans (such as a Master Plan or other community development related plan) and has a significant impact on the local or regional economy. This may include areas with planned future land uses such that would increase density and traffic volume (high-density commercial, residential, or mixed-use developments).

Additional Information for consideration (if applicable):

- Current number of lanes
- Proposed number of lanes
- Current lane width
- Proposed lane width
- Total crashes on segment in last 3 years
- Drainage problem corrected?
- Replace/new bridge or culvert as part of project?
- Project benefits other modes (wide shoulders, separated nonmotorized facility done as part of project, correct hazardous intersection)

Acronyms/Definitions

AADT (Annual Average Daily Traffic) – Traffic metric that represents the average number of vehicles passing a specific point on a roadway per day over the course of a year.

CAADT (Commercial Annual Average Daily Traffic) – Traffic measurement that specifically tracks the average number of commercial vehicles such as trucks, buses, and delivery vehicles passing a certain point on a roadway per day over the course of a year.

MEV (Million Entering Vehicle) – Quantity of vehicles entering a specific point, location, or area over a given year, expressed in millions.

MiEJ Screen – A mapping tool developed by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) to identify and visualize areas in Michigan facing environmental justice concerns.

MTP (Metropolitan Transportation Plan) – A long-term, strategic document developed by a MPO to guide transportation investments and policies in a metropolitan region over a 20-25 year horizon.

MVMT (Million Vehicle Miles Traveled) – A common way to measure exposure in traffic safety. Crash rates are often expressed as crashes per million vehicle miles traveled.

RSL (Remaining Service Life) – Measure used to estimate the amount of time a roadway, bridge, or other infrastructure component will continue to perform its intended function before requiring significant rehabilitation, reconstruction, or replacement.

Summary of Crash Statistics

Grand Traverse (County)

Report Module: Safety Management Analysis

Today's Date: Thursday, September 12, 2024

Dates: 01/01/2019 to 12/31/2023

Animal Crashes: Excluded

Criteria:

Start Date >= 01/01/2019
End Date <= 12/31/2023

NOTE: For most of the categories, a crash may be counted in only one of the option items. For example, in the CRASHES BY DAY OF THE WEEK category, a crash may be counted in the total of only one day (the option item); i.e.-- a crash counted in the total for Monday is not counted in the totals for any of the other days. There are two exceptions to this rule: for the CRASHES BY INVOLVEMENT and CRASHES BY DRIVER VIOLATION categories a crash may be counted in more than one of the option items. For example, a crash may involve Drinking, Deer, and Fleeing Situation; in the CRASHES BY INVOLVEMENT category this crash would be counted in the totals of three of the option items (Drinking, Deer, and Fleeing Situation).

Also, the percentages listed in parenthesis are a representation of the total crashes for each option item as a percent of the TOTAL NUMBER OF CRASHES in the selected date range. The percentages listed after each Fatal + A-type option item total in the CRASHES BY DRIVER VIOLATION category are an exception; these percentages represent the total Fatal and A-type Injury crashes as a percentage of the Driver Violation option item total that they follow (and are grouped with, as indicated by the horizontal dividing lines).

TTCI

FY 2027 Project Nomination

Grand Traverse County Road Commission

S. Airport Rd: Townline Rd to Three Mile Rd

Project will consist of crushing and shaping/mill and overlay the existing roadway surface, correcting base issues, driveway approaches, drainage improvements and pavement markings on S. Airport Road from Townline Road to Three Mile Road. From Townline Road easterly to Judson the roadway will be milled and overlayed adding 5' paved shoulders. From Judson Street Easterly to Three Mile Road the roadway will be crush and shaped. A center left turn lane will also be added from Judson Street to Three Mile Road due to driveway density and as a countermeasure to the crashes that have occurred on this segment, this will expand the current roadway from two, 11' lanes to three 11' lanes.

Project Conditions

PASER rating: 2 Remaining Service Life (RSL): -7 years

Is this project 100% preserve? ☐ Yes ■ No

Is this a preventative maintenance project? ☐ Yes ■ No

☐ Please attach a description of the preventative maintenance fix(es) since the last reconstruction. Describe the fix(es) and include the year the fix(es) was/were completed.

Does this project have a capacity change? ■ Yes ☐ No
If yes, please attach travel analysis in pdf format.

Traffic Volume (AADT): 13342 Freight Traffic Volume (CAADT): _____

Estimated % Commercial Traffic: 10 On MTP Freight Route? ■ Yes ☐ No

Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route? ■ Yes ☐ No

Functional Class: minor arterial Year of last improvement: 2020

Description of last improvement: crack seal

Funding

Federal Non-Participating Work?

☐ Yes ☐ No

Advance Construction Funding?

☐ Yes ■ No

If yes to either question, please explain: _____

If you have a preferred funding source, check box: ■ STP ☐ CMAQ

Proposed Participating Cost	$ 1350000	Proposed Federal	$ 1000000
Proposed Non-Participating Cost	$	Proposed State	$
Total Project Cost	$ 1350000	Proposed Local	$ 500000

Planning

Project Listed in the TTCI Metropolitan Transportation Plan (MTP)? ■ Yes ☐ No ☐ N/A

Project Identified in Local Plan? ■ Yes ☐ No (If "Yes," please attach pages from plan)

Project Conforms to Complete Streets Policy? ■ Yes ☐ No ☐ N/A

Describe existing and future non-motorized facilities within the project limits/additional comments/exception rational:

Project located in Environmental Justice Area? ☐ Yes ■ No

If yes, please include the MiEJ Environmental Justic Score: _____
Please attach a map/screenshot from MiEJScreen Mapping Tool

Safety

Number of crashes per MVMT/MEV: 1.6

Does the project fix the identified correctable safety issues? ■ Yes ☐ No

Describe how the project fixes identified correctable safety issues:

Project includes adding 5' paved shoulders and adding a center left turn lane at Eastward Dr and Hidden Creek Dr

This will be a countermeasure to the fixed object, angle, sideswipe and rear end crashes experienced int this area

Assessment

If the answer is "Yes" to any of the following criteria, provide additional explanation in an attachment. Please consider the following factors when completing the work description:

Regional Benefit – Is there a benefit beyond the project to the area wide transportation system or region?	■ Yes ☐ No
Connectivity – Does the project add or enhance a road connection between two or more existing roadways functionally classified as a Major Collector or higher; OR add or enhance connections between two or more pathway corridors or transit routes?	■ Yes ☐ No
Environmental Justice – Is the project located within an identified EJ area and are no adverse impacts projected?	☐ Yes ■ No
Complete Streets – Does the project contain enhancements to serve pedestrians, cyclists, and/or transit users?	■ Yes ☐ No
Transit – Will the project improve service, efficiency, and attractiveness of public transit?	■ Yes ■ No
Green Infrastructure – Does the project involve the use of stormwater best management practices?	■ Yes ☐ No
Environment – Does the project contain elements to preserve, mitigate, or enhance an environmentally sensitive area?	■ Yes ☐ No
Economic Development – Does the project support job creation or growth?	■ Yes ☐ No
Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route?	■ Yes ☐ No
Safety – Can the project be shown to do one or more of the following: reduce fatalities and serious injuries; reduce nonmotorized crashes; enhance transit safety?	■ Yes ☐ No

Narrative

Please attach a narrative for the project and be certain to address the following specific issues:

Local Municipality Infrastructure Coordination: May include projects that cross jurisdictional boundaries, utilize grant funding that must be expended within a limited time-frame, bridge construction or culvert maintenance or replacement, projects being undertaken by public transit agencies or port authorities, rail or freight authorities, non-motorized projects, or projects that may be built concurrently with public utility projects.

Local Planning & Economic Development: Includes projects that are in local or regional plans (such as a Master Plan or other community development related plan) and has a significant impact on the local or regional economy. This may include areas with planned future land uses such that would increase density and traffic volume (high-density commercial, residential, or mixed-use developments).

Additional Information for consideration (if applicable):

- Current number of lanes
- Proposed number of lanes
- Current lane width
- Proposed lane width
- Total crashes on segment in last 3 years
- Drainage problem corrected?
- Replace/new bridge or culvert as part of project?
- Project benefits other modes (wide shoulders, separated nonmotorized facility done as part of project, correct hazardous intersection)

Acronyms/Definitions

AADT (Annual Average Daily Traffic) – Traffic metric that represents the average number of vehicles passing a specific point on a roadway per day over the course of a year.

CAADT (Commercial Annual Average Daily Traffic) – Traffic measurement that specifically tracks the average number of commercial vehicles such as trucks, buses, and delivery vehicles passing a certain point on a roadway per day over the course of a year.

MEV (Million Entering Vehicle) – Quantity of vehicles entering a specific point, location, or area over a given year, expressed in millions.

MiEJ Screen – A mapping tool developed by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) to identify and visualize areas in Michigan facing environmental justice concerns.

MTP (Metropolitan Transportation Plan) – A long-term, strategic document developed by a MPO to guide transportation investments and policies in a metropolitan region over a 20-25 year horizon.

MVMT (Million Vehicle Miles Traveled) – A common way to measure exposure in traffic safety. Crash rates are often expressed as crashes per million vehicle miles traveled.

RSL (Remaining Service Life) – Measure used to estimate the amount of time a roadway, bridge, or other infrastructure component will continue to perform its intended function before requiring significant rehabilitation, reconstruction, or replacement.

Summary of Crash Statistics

Grand Traverse (County)

Report Module: Safety Management Analysis

Today's Date: Wednesday, October 16, 2024

Dates: 01/01/2019 to 12/31/2023

Animal Crashes: Included

Criteria:

Start Date >= 01/01/2019
End Date <= 12/31/2023
Crash Type = Angle Driveway or Angle Straight or Angle Turn or Backing or Bicycle or Fixed Object or Head-on or Head-On Left Turn Driveway or Head-On Left-Turn Not Associated with Driveway or Hit Train or Misc. Multiple Vehicle or Misc. Single Vehicle or Other Driveway or Other Object or Overturn or Parking or Pedestrian or Rear End Driveway or Rear End Left Turn or Rear End Right Turn or Rear End Straight or Side-Swipe Opposite or Side-Swipe Same

NOTE: For most of the categories, a crash may be counted in only one of the option items. For example, in the CRASHES BY DAY OF THE WEEK category, a crash may be counted in the total of only one day (the option item); i.e.-- a crash counted in the total for Monday is not counted in the totals for any of the other days. There are two exceptions to this rule: for the CRASHES BY INVOLVEMENT and CRASHES BY DRIVER VIOLATION categories a crash may be counted in more than one of the option items. For example, a crash may involve Drinking, Deer, and Fleeing Situation; in the CRASHES BY INVOLVEMENT category this crash would be counted in the totals of three of the option items (Drinking, Deer, and Fleeing Situation).

Also, the percentages listed in parenthesis are a representation of the total crashes for each option item as a percent of the TOTAL NUMBER OF CRASHES in the selected date range. The percentages listed after each Fatal + A-type option item total in the CRASHES BY DRIVER VIOLATION category are an exception; these percentages represent the total Fatal and A-type Injury crashes as a percentage of the Driver Violation option item total that they follow (and are grouped with, as indicated by the horizontal dividing lines).

FY 2028 Project Nomination

Grand Traverse County Road Commission

S. Airport Rd: Silver Lake Road to 1275’ west of US-31/M-37

Project will consist of crushing and shaping the existing roadway surface, correcting base issues, guardrail upgrades, driveway approaches, drainage improvements and pavement markings on S. Airport Rd from Silver Lake Road to 1275’ west of US-31/M-37. A center left turn lane will also be added on S. Airport Rd/Hidden Creek Drive and S. Airport/Eastward Drive intersections, this will expand the current roadway from two, 11’ lanes to three 11’ lanes in these areas.

Is this a preventative maintenance project? ☐ Yes ■ No

☐ Please attach a description of the preventative maintenance fix(es) since the last reconstruction. Describe the fix(es) and include the year the fix(es) was/were completed.

Does this project have a capacity change? ☐ Yes ■ No
If yes, please attach travel analysis in pdf format.

Traffic Volume (AADT): 5295 Freight Traffic Volume (CAADT): _____

Estimated % Commercial Traffic: 3% On MTP Freight Route? ☐ Yes ■ No

Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route? ☐ Yes ■ No

Functional Class: Major Collector Year of last improvement: 2013

Description of last improvement: Chip seal w/fog seal

Funding

Federal Non-Participating Work?

☐ Yes ■ No

Advance Construction Funding?

☐ Yes ☐ No

If yes to either question, please explain:

If you have a preferred funding source, check box: ☐ STP ☐ CMAQ

Proposed Participating Cost	$ 1,573,128	Proposed Federal	$ 1,222,000
Proposed Non-Participating Cost	$ 1,959,005	Proposed State	$
Total Project Cost	$ 3,532,133	Proposed Local	$ 480,125

Planning

Project Listed in the TTCI Metropolitan Transportation Plan (MTP)? ☐ Yes ☐ No ■ N/A

Project Identified in Local Plan? ☐ Yes ☐ No (If "Yes," please attach pages from plan)

Project Conforms to Complete Streets Policy? ■ Yes ☐ No ☐ N/A

Describe existing and future non-motorized facilities within the project limits/additional comments/exception rational:

Currently the Tart Trail from Traverse City to Suttons Bay bisects Cherry Bend Rd. MDOT will be constructing a new non-motorized path along M-22 up to Cherry Bend Rd.

This project is proposing to link these two trail segments together and provide a safe path for pedestrians and bicyclists outside the limits of the roadway.

Project located in Environmental Justice Area? ☐ Yes ■ No

If yes, please include the MiEJ Environmental Justic Score:

Please attach a map/screenshot from MiEJScreen Mapping Tool

Safety

Number of crashes per MVMT/MEV: 15

Does the project fix the identified correctable safety issues? ■ Yes ☐ No

Describe how the project fixes identified correctable safety issues:

There was one bicycle/vehicle accidents, construction of the non-motorized path along the south side of Cherry Bend Rd will separate motorized and non-motorized vehicles.

Assessment

If the answer is "Yes" to any of the following criteria, provide additional explanation in an attachment. Please consider the following factors when completing the work description:

Regional Benefit – Is there a benefit beyond the project to the area wide transportation system or region?	■ Yes ☐ No
Connectivity – Does the project add or enhance a road connection between two or more existing roadways functionally classified as a Major Collector or higher; OR add or enhance connections between two or more pathway corridors or transit routes?	■ Yes ☐ No
Environmental Justice – Is the project located within an identified EJ area and are no adverse impacts projected?	☐ Yes ■ No
Complete Streets – Does the project contain enhancements to serve pedestrians, cyclists, and/or transit users?	■ Yes ☐ No
Transit – Will the project improve service, efficiency, and attractiveness of public transit?	■ Yes ☐ No
Green Infrastructure – Does the project involve the use of stormwater best management practices?	■ Yes ☐ No
Environment – Does the project contain elements to preserve, mitigate, or enhance an environmentally sensitive area?	■ Yes ☐ No
Economic Development – Does the project support job creation or growth?	■ Yes ☐ No
Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route?	■ Yes ☐ No
Safety – Can the project be shown to do one or more of the following: reduce fatalities and serious injuries; reduce nonmotorized crashes; enhance transit safety?	■ Yes ☐ No

Narrative

Please attach a narrative for the project and be certain to address the following specific issues:

Local Municipality Infrastructure Coordination: May include projects that cross jurisdictional boundaries, utilize grant funding that must be expended within a limited time-frame, bridge construction or culvert maintenance or replacement, projects being undertaken by public transit agencies or port authorities, rail or freight authorities, non-motorized projects, or projects that may be built concurrently with public utility projects.

Local Planning & Economic Development: Includes projects that are in local or regional plans (such as a Master Plan or other community development related plan) and has a significant impact on the local or regional economy. This may include areas with planned future land uses such that would increase density and traffic volume (high-density commercial, residential, or mixed-use developments).

Additional Information for consideration (if applicable):

- Current number of lanes
- Proposed number of lanes
- Current lane width
- Proposed lane width
- Total crashes on segment in last 3 years
- Drainage problem corrected?
- Replace/new bridge or culvert as part of project?
- Project benefits other modes (wide shoulders, separated nonmotorized facility done as part of project, correct hazardous intersection)

Narrative

Cherry Bend Road (CR 633) is a major collector within Elmwood Township and moves traffic northwest/southeast. This is a major throughfare that connects to other north/south primary roads within the county. This segment channels residents from the northern part of the county, to their places of employment and to businesses in Traverse City and Grand Traverse County.

The region is well known for its use of non-motorized transportation. The TART extends the entire length of Elmwood Township and there are two formal trailheads (Cherry Bend Trailhead and Fouch Trailhead) within the Township, one of which is located within the project area. The TART is a multi-functional, non-motorized route used by commuters and for recreation. With the reconstruction of the M-22 corridor in 2025, MDOT will construct an extension of the Tart Trail along the Bay that will end at Cherry Bend Road. Without additional improvements along Cherry Bend, this will leave trail users with no safe, off-street connection from M22 to the Cherry Bend Trailhead. This project plans to continue the trail along M-22Cherry Bend TART trailhead and beyond to Elmwood Township's Cherry Bend Park.

Leelanau County Road Commission (LCRC), Elmwood Township, TART, and Networks Northwest are currently working together to apply for TAP Grant funds for construction of the trail connector. An application will be filed within the coming months and currently has support of local and state agencies, as well as local nonprofits.

Cherry Bend Road is currently 34-foot wide with 2-11' lanes and 6' shoulders. The road has a PASER rating of 3 along the eastern 2-mile segment and is a 4 along the western 2-mile segment and is in need of reconstruction. This need will likely be exacerbated with its use as an unofficial detour during MDOT's rebuild of M-22 from M-72 to Cherry Bend Road in 2025. Given the necessary roadwork for Cherry Bend Road in 2026, local agencies began discussing other right-of-way improvements. Months, if not years of planning led to the design of a trail segment along the south side of Cherry Bend Road with a 5' buffer between the road and the trail. To maximize space while providing adequate stormwater management, curb and gutter will be constructed along this section of Cherry Bend, with a new storm sewer system. Construction of necessary drainage improvements as well as a trail with an adequate width within the right-of-way would encroach into the existing roadway. Therefore, to provide safe pedestrian access, reconstruction of half of the roadway is required.

The TAP Grant will not pay for construction of the roadway so we are seeking TTCI funds to help with the cost of this locally coordinated (Road Commission, Elmwood Township, TART, Networks Northwest) project. With the condition the road is currently in, it is reasonable to reconstruct the 34' full width cross-section of Cherry Bend. This full width cross-section carries from Breithaupt Road to M-22. This segment has extensive wheel path cracking and requires the same fix of a crush and shape and a two course 3.5" HMA Overlay.

Additional Information for consideration (if applicable)**:**

- Current number of lanes
  2

- Proposed number of lanes
  2

- Current lane width
  11’ lane/6’ shoulder

- Proposed lane width
  11’ lane/6’ shoulder

- Total crashes on segment in last 3 years
  15 Total
  - (7) Fixed Object
  - (4) Rear End
  - (3) Angle
  - (1) Bicycle

- Drainage problem corrected?
  Curb and Gutter will be installed on the south side of the road from M-22 to Pickwick to provide a safe break between the roadway and the proposed trail. Storm sewer and drainage structures will be installed to capture stormwater runoff.

- Replace/new bridge or culvert as part of project?
  Due to their age, all existing culverts will be replaced.

- Project benefits other modes (wide shoulders, separated nonmotorized facility done as part of project, correct hazardous intersection)
  The proposed Tart Trail segment and reconstruction of Cherry Bend Road will provide safe connections for cross county bicycle, pedestrian and vehicular traffic

Assessment

Regional Benefit – The proposed Tart Trail segment and reconstruction of Cherry Bend Road will improve safety for vehicular users, as well as increasing safety for pedestrians and non-motorized transportation users. The desire for this safe connection has been highlighted within Elmwood Township's Park and Recreation Plan. We cannot stress the importance of this project enough; after MDOT completes road improvements, the trail will end at M-22 and Cherry Bend, leaving no safe, off-street access to the TART.

Connectivity – Cherry Bend Road is used by many residents of Leelanau County that work in and around Traverse City and Grand Traverse County. It serves as an alternate route for north/south traffic and as a cut through route into Traverse City. Cherry Bend serves as an alternate route for emergency services to access the hospital. Within the project area, there is a fixed route stop for BATA (Cherry Bend at Leelanau Studios).

Environmental Justice – None

Complete Streets – This will provide a connector between TART segments to enhance non-motorized traffic.

Transit – This will provide a connector between TART segments to enhance non-motorized traffic. Within the project area, there is a fixed route stop for BATA (Cherry Bend at Leelanau Studios).

Green Infrastructure – Curb and gutter will be installed on the south side of the road from M-22 to Pickwick to provide a safe break between the roadway and the proposed trail. Storm sewer and drainage structures will be installed to capture stormwater runoff.

Environment – Construction of the proposed path will encourage more use of non-motorized vehicles. Improvements to stormwater management and filtration are also proposed.

Economic Development – This road segment is part of the all-season route, and serves as a connector to other facilities in Leelanau County that rely on year-round distribution. This road segment currently connects commercial corridors within Elmwood Township. Additionally, Elmwood Township's Master Plan currently designates all land adjacent to the project area as 'Grelickville Service Area.' Pursuant to this Plan, "Lands found in this classification are generally planned for more intense uses and densities than other locations. This is due in part to the availability of public water and sanitary sewer facilities, and the proximity to compatible land uses in the city of Traverse City."

Freight – Cherry Bend is not a freight route, but will be utilized as a corridor by a proposed manufacturing facility 1.5 miles north of Cherry Bend Road on Center Highway.

Safety – Eleven subdivisions, high density residential zoned land, Cedar Creek Senior Apartments, *and* Orchard Creek Senior Living are adjacent to Cherry Bend Road within the project area. Further, the project area is home to Elmwood Township's Cherry Bend Park, Thompson Surgical Instruments, various smaller businesses, a Church, the Cedar Lake Boat Launch, Cherry Bend TART Trailhead, the Grand Traverse Regional Arts Campus, a voting precinct, and a County Recycling Site.

Many residents of the community enjoy the recreational use of the TART to access Traverse City and Suttons Bay. Currently residents use the shoulder area of Cherry Bend Road to access TART via the

Cherry Bend Trailhead, Elmwood Township's Cherry Bend Park, as well as the sidewalk along M-22. The proposed trail segment and road upgrades will provide a safe area for all right-of-way users. With planned MDOT improvements to the M-22 corridor, Cherry Bend Road improvements and providing a safe pedestrian connection will be necessary.

CHARTER TOWNSHIP OF ELMWOOD
RESOLUTION 15 OF 2023
COMPLETE STREETS RESOLUTION

WHEREAS, increasing walking and bicycling offers the potential for greater health of the population, and more livable communities; and

WHEREAS, A Complete Street is safe, comfortable, and convenient for travel by automobile, foot, bicycle, and transit regardless of age or ability, and

WHEREAS, The Michigan Legislature has passed Complete Streets legislation that requires the Michigan Department of Transportation and local governments to consider all users in transportation related projects; and

WHEREAS, the Michigan Planning Enabling Act has been amended, requiring that all transportation improvements identified in a plan are appropriate to the context of the community and considers all legal users of the public right of way; and

WHEREAS, Complete Streets support economic growth and community stability by providing accessible and efficient connections between home, school, work, recreation and retail destinations by improving the pedestrian and vehicular environments throughout communities; and

WHEREAS, Complete Streets enhance safe walking and bicycling options for school-age children, in recognition of the objectives of the national Safe Routes to School program; and

WHEREAS, the Charter Township of Elmwood recognizes the importance of street infrastructure and modifications such as sidewalks, crosswalks, shared use paths, bicycle lanes, signage, narrow vehicle lanes and accessible curb ramps, that enable safe, convenient, and comfortable travel for all users;

NOW THEREFOR IT BE RESOLVED, by the Township Board of the Charter Township of Elmwood, Leelanau County, Michigan that:

FIRST: to the extent feasible, the Charter Township of Elmwood will include Complete Streets design considerations and practices as a routine part of infrastructure planning and implementation; and

SECOND: The Charter Township of Elmwood supports participation in the future development of local and regional non-motorized transportation plans, to include Park and Recreation Planning and consideration of a Complete Streets ordinance that supports ease of use and safety for all users of transportation systems within the Charter Township of Elmwood.

PASSED AND APPROVED BY THE TOWNSHIP BOARD OF THE CHARTER TOWNSHIP OF ELMWOOD, LEELANAU COUNTY, MICHIGAN THIS _____ DAY OF _____, 2023.

AYES:
NAYS:
ABSENT:

I **Connie M. Preston**, Clerk of the Charter Township of Elmwood, having duly sworn the oath of office, do attest to the above resolution offered and approved by the Township Board of the Charter Township of Elmwood, Leelanau County, Michigan.

Does the project fix the identified correctable safety issues? ■ Yes ☐ No

Describe how the project fixes identified correctable safety issues:

Both crashes involved negotiating a curve, design will include evaluating superelevation for the intended design speed.

Assessment

If the answer is "Yes" to any of the following criteria, provide additional explanation in an attachment. Please consider the following factors when completing the work description:

Regional Benefit – Is there a benefit beyond the project to the area wide transportation system or region?	■ Yes ☐ No
Connectivity – Does the project add or enhance a road connection between two or more existing roadways functionally classified as a Major Collector or higher; OR add or enhance connections between two or more pathway corridors or transit routes?	■ Yes ☐ No
Environmental Justice – Is the project located within an identified EJ area and are no adverse impacts projected?	☐ Yes ■ No
Complete Streets – Does the project contain enhancements to serve pedestrians, cyclists, and/or transit users?	☐ Yes ■ No
Transit – Will the project improve service, efficiency, and attractiveness of public transit?	■ Yes ☐ No
Green Infrastructure – Does the project involve the use of stormwater best management practices?	■ Yes ☐ No
Environment – Does the project contain elements to preserve, mitigate, or enhance an environmentally sensitive area?	■ Yes ☐ No
Economic Development – Does the project support job creation or growth?	■ Yes ☐ No
Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route?	■ Yes ☐ No
Safety – Can the project be shown to do one or more of the following: reduce fatalities and serious injuries; reduce nonmotorized crashes; enhance transit safety?	■ Yes ☐ No

Narrative

Please attach a narrative for the project and be certain to address the following specific issues:

Local Municipality Infrastructure Coordination: May include projects that cross jurisdictional boundaries, utilize grant funding that must be expended within a limited time-frame, bridge construction or culvert maintenance or replacement, projects being undertaken by public transit agencies or port authorities, rail or freight authorities, non-motorized projects, or projects that may be built concurrently with public utility projects.

Local Planning & Economic Development: Includes projects that are in local or regional plans (such as a Master Plan or other community development related plan) and has a significant impact on the local or regional economy. This may include areas with planned future land uses such that would increase density and traffic volume (high-density commercial, residential, or mixed-use developments).

Additional Information for consideration (if applicable):

- Current number of lanes
- Proposed number of lanes
- Current lane width
- Proposed lane width
- Total crashes on segment in last 3 years
- Drainage problem corrected?
- Replace/new bridge or culvert as part of project?
- Project benefits other modes (wide shoulders, separated nonmotorized facility done as part of project, correct hazardous intersection)

Acronyms/Definitions

AADT (Annual Average Daily Traffic) – Traffic metric that represents the average number of vehicles passing a specific point on a roadway per day over the course of a year.

CAADT (Commercial Annual Average Daily Traffic) – Traffic measurement that specifically tracks the average number of commercial vehicles such as trucks, buses, and delivery vehicles passing a certain point on a roadway per day over the course of a year.

MEV (Million Entering Vehicle) – Quantity of vehicles entering a specific point, location, or area over a given year, expressed in millions.

MiEJ Screen – A mapping tool developed by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) to identify and visualize areas in Michigan facing environmental justice concerns.

MTP (Metropolitan Transportation Plan) – A long-term, strategic document developed by a MPO to guide transportation investments and policies in a metropolitan region over a 20-25 year horizon.

MVMT (Million Vehicle Miles Traveled) – A common way to measure exposure in traffic safety. Crash rates are often expressed as crashes per million vehicle miles traveled.

RSL (Remaining Service Life) – Measure used to estimate the amount of time a roadway, bridge, or other infrastructure component will continue to perform its intended function before requiring significant rehabilitation, reconstruction, or replacement.

Environmental Justice – None

Complete Streets – None

Transit – This will provide a connector between TART segments to enhance non-motorized traffic. Within the project area, there is a fixed route stop for BATA (Cherry Bend at Leelanau Studios).

Green Infrastructure – Due to their age, all existing culverts will be replaced.

Environment – Due to their age, all existing culverts will be replaced.

Economic Development – This road segment is part of the all-season route, and serves as a connector to other facilities in Leelanau County that rely on year-round distribution.

Freight – Cherry Bend is not a freight route, but will be utilized as a corridor by a proposed manufacturing facility 1.5 miles north of Cherry Bend Road on Center Highway.

Safety – Eleven subdivisions, high density residential zoned land, Cedar Creek Senior Apartments, *and* Orchard Creek Senior Living are adjacent to Cherry Bend Road within the project area. Further, the project area is home to Elmwood Township's Cherry Bend Park, Thompson Surgical Instruments, various smaller businesses, a Church, the Cedar Lake Boat Launch, Cherry Bend TART Trailhead, the Grand Traverse Regional Arts Campus, a voting precinct, and a County Recycling Site.

Many residents of the community enjoy the recreational use of the TART to access Traverse City and Suttons Bay. Currently residents use the shoulder area of Cherry Bend Road to access TART via the Cherry Bend Trailhead, Elmwood Township's Cherry Bend Park, as well as the sidewalk along M-22. The proposed trail segment and road upgrades will provide a safe area for all right-of-way users. With planned MDOT improvements to the M-22 corridor, Cherry Bend Road improvements and providing a safe pedestrian connection will be necessary.

Project: Cherry Bend Rd. CR 663 (CR 641 to Center Hwy.)

PROJECT/PROGRAM NOMINATION FORM

Transit agency legal name: Leelanau County Road Commission

Agency contact person: Craig Brown

Proposed project: Reconstruction of Cherry Bend Road and construction of a connector between two Tart Trail Segments

Local agency project rank: High

Fiscal year funding is requested: 2029 Proposed let date: 01/2029

Major route: Cherry Bend Road (CR 633)

Project limits: CR 641 to Center Hwy

Length (in mi.): 0.907 ■ Project area map attached?

Project description: Crush and shape with a 3 1/2" HMA overlay on Cherry Bend Road.

Project Conditions

PASER rating: 4 Remaining Service Life (RSL): 0 years

Is this project 100% preserve? ☐ Yes ■ No

Is this a preventative maintenance project? ☐ Yes ■ No

☐ Please attach a description of the preventative maintenance fix(es) since the last reconstruction. Describe the fix(es) and include the year the fix(es) was/were completed.

Does this project have a capacity change? ☐ Yes ■ No
If yes, please attach travel analysis in pdf format.

Traffic Volume (AADT): 2132 Freight Traffic Volume (CAADT): _____

Estimated % Commercial Traffic: 3% On MTP Freight Route? ☐ Yes ■ No

Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route? ☐ Yes ■ No

Functional Class: Major Collector Year of last improvement: 2013

Description of last improvement: Chip seal w/fog seal

Funding

Federal Non-Participating Work?

☐ Yes ■ No

Advance Construction Funding?

☐ Yes ☐ No

If yes to either question, please explain:

If you have a preferred funding source, check box: ☐ STP ☐ CMAQ

Proposed Participating Cost	$ 641,200	Proposed Federal	$ 512,900
Proposed Non-Participating Cost	$	Proposed State	$
Total Project Cost	$	Proposed Local	$ 128,300

Planning

Project Listed in the TTCI Metropolitan Transportation Plan (MTP)? ☐ Yes ☐ No ■ N/A

Project Identified in Local Plan? ☐ Yes ☐ No (If "Yes," please attach pages from plan)

Project Conforms to Complete Streets Policy? ☐ Yes ☐ No ■ N/A

Describe existing and future non-motorized facilities within the project limits/additional comments/exception rational:

Project located in Environmental Justice Area? ☐ Yes ■ No

If yes, please include the MiEJ Environmental Justic Score:

Please attach a map/screenshot from MiEJScreen Mapping Tool

Safety

Number of crashes per MVMT/MEV: 5

Does the project fix the identified correctable safety issues? ■ Yes ☐ No

Describe how the project fixes identified correctable safety issues:

Two crashes involved going to fast for snowy/slush conditions.

Two crashes involved failure to yield to another vehicle, one involved distracted driver.

Assessment

If the answer is "Yes" to any of the following criteria, provide additional explanation in an attachment. Please consider the following factors when completing the work description:

Regional Benefit – Is there a benefit beyond the project to the area wide transportation system or region?	■ Yes ☐ No
Connectivity – Does the project add or enhance a road connection between two or more existing roadways functionally classified as a Major Collector or higher; OR add or enhance connections between two or more pathway corridors or transit routes?	■ Yes ☐ No
Environmental Justice – Is the project located within an identified EJ area and are no adverse impacts projected?	☐ Yes ■ No
Complete Streets – Does the project contain enhancements to serve pedestrians, cyclists, and/or transit users?	☐ Yes ■ No
Transit – Will the project improve service, efficiency, and attractiveness of public transit?	■ Yes ☐ No
Green Infrastructure – Does the project involve the use of stormwater best management practices?	■ Yes ☐ No
Environment – Does the project contain elements to preserve, mitigate, or enhance an environmentally sensitive area?	■ Yes ☐ No
Economic Development – Does the project support job creation or growth?	■ Yes ☐ No
Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route?	■ Yes ☐ No
Safety – Can the project be shown to do one or more of the following: reduce fatalities and serious injuries; reduce nonmotorized crashes; enhance transit safety?	■ Yes ☐ No

Narrative

Please attach a narrative for the project and be certain to address the following specific issues:

Local Municipality Infrastructure Coordination: May include projects that cross jurisdictional boundaries, utilize grant funding that must be expended within a limited time-frame, bridge construction or culvert maintenance or replacement, projects being undertaken by public transit agencies or port authorities, rail or freight authorities, non-motorized projects, or projects that may be built concurrently with public utility projects.

Local Planning & Economic Development: Includes projects that are in local or regional plans (such as a Master Plan or other community development related plan) and has a significant impact on the local or regional economy. This may include areas with planned future land uses such that would increase density and traffic volume (high-density commercial, residential, or mixed-use developments).

Additional Information for consideration (if applicable):

- Current number of lanes
- Proposed number of lanes
- Current lane width
- Proposed lane width
- Total crashes on segment in last 3 years
- Drainage problem corrected?
- Replace/new bridge or culvert as part of project?
- Project benefits other modes (wide shoulders, separated nonmotorized facility done as part of project, correct hazardous intersection)

Acronyms/Definitions

AADT (Annual Average Daily Traffic) – Traffic metric that represents the average number of vehicles passing a specific point on a roadway per day over the course of a year.

CAADT (Commercial Annual Average Daily Traffic) – Traffic measurement that specifically tracks the average number of commercial vehicles such as trucks, buses, and delivery vehicles passing a certain point on a roadway per day over the course of a year.

MEV (Million Entering Vehicle) – Quantity of vehicles entering a specific point, location, or area over a given year, expressed in millions.

MiEJ Screen – A mapping tool developed by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) to identify and visualize areas in Michigan facing environmental justice concerns.

MTP (Metropolitan Transportation Plan) – A long-term, strategic document developed by a MPO to guide transportation investments and policies in a metropolitan region over a 20-25 year horizon.

MVMT (Million Vehicle Miles Traveled) – A common way to measure exposure in traffic safety. Crash rates are often expressed as crashes per million vehicle miles traveled.

RSL (Remaining Service Life) – Measure used to estimate the amount of time a roadway, bridge, or other infrastructure component will continue to perform its intended function before requiring significant rehabilitation, reconstruction, or replacement.

Narrative

Cherry Bend Road (CR 633) is a major collector within Elmwood Township and moves traffic northwest/southeast. This is a major throughfare that connects to other north/south primary roads within the county. This segment channels residents from the northern part of the county, to their places of employment and to businesses in Traverse City and Grand Traverse County.

Cherry Bend Road is currently 28-foot wide with 2-11’ lanes and 3’ shoulders. The road has a PASER rating of 3 along the eastern 2-mile segment and is a 4 along the western 2-mile segment and is in need of reconstruction. This need will likely be exacerbated with its use as an unofficial detour during MDOT’s rebuild of M-22 from M-72 to Cherry Bend Road in 2025. Given the necessary roadwork for Cherry Bend Road in 2026, local agencies began discussing other right-of-way improvements.

We are seeking TTCI funds to help with the cost of this locally coordinated project. With the condition the road is currently in, it is reasonable to reconstruct the 28’ full width cross-section of Cherry Bend. This full width cross-section carries from CR 641 Road to Breithaupt Rd. This segment has extensive cracking and requires the same fix of a crush and shape and a two course 3.5” HMA Overlay.

Additional Information for consideration (if applicable)**:**

- Current number of lanes
  2

- Proposed number of lanes
  2

- Current lane width
  11’ lane/3’ shoulder

- Proposed lane width
  11’ lane/3’ shoulder

  - (3) Fixed Object
  - (1) Rear End
  - (1) Angle

- Drainage problem corrected?
  Due to their age, all existing culverts will be replaced.

- Replace/new bridge or culvert as part of project?
  Due to their age, all existing culverts will be replaced.

- Project benefits other modes (wide shoulders, separated nonmotorized facility done as part of project, correct hazardous intersection)
  The proposed Tart Trail segment and reconstruction of Cherry Bend Road will provide safe connections for cross county bicycle, pedestrian and vehicular traffic

Assessment

Regional Benefit – Cherry Bend Road is used by many residents of Leelanau County that work in and around Traverse City and Grand Traverse County. It serves as a redundant route for north/south traffic and as a cut through route into Traverse City. Cherry Bend serves as an alternate route for emergency services to access the hospital.

Connectivity – Cherry Bend Road is used by many residents of Leelanau County that work in and around Traverse City and Grand Traverse County. It serves as a redundant route for north/south traffic and as a cut through route into Traverse City. Cherry Bend serves as an alternate route for emergency services to access the hospital.

Environmental Justice – None

Complete Streets – None

Transit – This will provide a connector between TART segments to enhance non-motorized traffic. Within the project area, there is a fixed route stop for BATA (Cherry Bend at Leelanau Studios).

Green Infrastructure – Due to their age, all existing culverts will be replaced.

Environment – Due to their age, all existing culverts will be replaced.

Economic Development – This road segment is part of the all-season route, and serves as a connector to other facilities in Leelanau County that rely on year-round distribution.

Freight – Cherry Bend is not a freight route, but will be utilized as a corridor by a proposed manufacturing facility 1.5 miles north of Cherry Bend Road on Center Highway.

Safety – Eleven subdivisions, high density residential zoned land, Cedar Creek Senior Apartments, *and* Orchard Creek Senior Living are adjacent to Cherry Bend Road within the project area. Further, the project area is home to Elmwood Township's Cherry Bend Park, Thompson Surgical Instruments, various smaller businesses, a Church, the Cedar Lake Boat Launch, Cherry Bend TART Trailhead, the Grand Traverse Regional Arts Campus, a voting precinct, and a County Recycling Site.

Many residents of the community enjoy the recreational use of the TART to access Traverse City and Suttons Bay. Currently residents use the shoulder area of Cherry Bend Road to access TART via the Cherry Bend Trailhead, Elmwood Township's Cherry Bend Park, as well as the sidewalk along M-22. The proposed trail segment and road upgrades will provide a safe area for all right-of-way users. With planned MDOT improvements to the M-22 corridor, Cherry Bend Road improvements and providing a safe pedestrian connection will be necessary.

Boardman Avenue

- Regional benefit: Boardman Avenue serves as a major collector for its full length (approximately 1/3 mile) between Front and Eighth Streets. Upgrading of Boardman Avenue as proposed will generally improve the connection between Front and Eighth Streets, two regionally significant streets imperative to providing access to offices, retail, housing, and other regionally important destinations. This project will also improve the connection between Front and State Streets, in turn allowing for better flow onto State Street. The City and the DDA are actively promoting activation of State Street as an expansion of the core Downtown business district.

- Connectivity: This road improvement will result in enhanced pedestrian and bicycle circulation within the area by improving the non-motorized facilities connecting two regionally significant streets – Front (a major collector) and Eighth (a minor arterial) Streets. Boardman Avenue will be reconfigured to include narrower road lanes and widened and marked bike lanes. This will provide an overall safer and more comfortable pedestrian/cyclist experience and in turn promote non-motorized connections to the larger region as both Front and Eighth Streets are part of the designated bike routes providing connections throughout the City and to regional trails.

- Environmental Justice: See attached EJ map

- Complete Streets: As noted, the project will include designated pedestrian and bicycle infrastructure in addition to the improved vehicle travel lanes. All crossings will include accessible ramps and controlled crossings as called for under the City's Mobility Action Plan. This project represents an improvement to current hazardous conditions at the intersection.

- Transit: This improvement project limits includes a BATA transit stop at Boardman Avenue and Front Street. This is part of BATA's Bayline loop providing free east-west service throughout the region. This service provides access to Munson Medical Center, TCAPS Montessori and Central High School, NMC's Great Lakes Campus, and to BATA's Hall Street transfer station allowing for access to the larger transit system. Having improved pedestrian access along Boardman Avenue to this stop (along with other stops nearby) from the Eighth Street corridor will greatly improve access to transit for many current and potential future transit users.

- Green Infrastructure: This road improvement project includes green infrastructure elements as necessary to improve the storm water controls for this area. These may include dry wells, leaching basins and bioswales in appropriate locations.

- Environment: The green infrastructure elements of this project will improve water quality for storm water migrating to the Boardman/Ottaway River at both the north and south ends of the project area.

- Economic Development: Public infrastructure improvements within the central business district signals to impacted property and business owners that their investments in the community are warranted. This project includes an upgrade to the water service lines in addition to the street improvements along with associated non-motorized and stormwater improvements. Businesses' employees, suppliers and customers can more safely and efficiently access them as a result of

this improvement project. These proposed infrastructure improvements will support private investment and facilitate future growth.

- Freight: NA

- Safety: More narrow travel lanes (reducing vehicle travel speeds), designated pedestrian and bike travel zones and improved pedestrian crossings will undoubtedly improve safety throughout this project area, particularly for pedestrians.

Local Municipality Infrastructure Coordination Narrative

This project is part of a larger Brownfield Redevelopment Plan approved by the Grand Traverse County Brownfield Redevelopment Authority. The plan calls for replacement of a waterline along Boardman Avenue from Front Street to State Street and continuing west on to State Street.

In addition, the City's newly adopted Mobility Action Plan (MAP) calls for the full length of Broadman Avenue to be part of the proposed "Vision Bike Network" connecting all sectors of the City for cyclists. Currently, there is no existing bike lane along Boardman Avenue; this street is identified in the MAP as a "high stress" route for cyclists navigating the City but is an important north-south link. Today there are bike lanes running east-west on Front, State, and Eighth (cycle track) Streets but no north-south bike lane routes connecting these three east-west routes within the central business district. Cyclists need to travel west 11 blocks to Elmwood or east 3 blocks to Railroad to connect to a bike lane, TART trail, or designated bike route from Front Street. Boardman Avenue would be the first and only connection to existing bike lanes/cycle track on all three major east-west routes (Front, State, and Eighth).

Local Planning and Economic Development Narrative

The Downtown Development Authority's (DDA's) newly adopted downtown plan, called Moving Downtown Forward (MDF), documents strong support for public infrastructure improvements as a means to achieve the community's vision for the downtown. In fact, public input as part of MDF's process identified the two highest scoring initiatives as "improve stormwater and wastewater management in downtown to reduce flooding impacts and protect water quality" and "make downtown more pedestrian-friendly and accessible" (page 6 of the Traverse City Moving Downtown Forward Survey Summary). The Boardman Avenue improvement project addresses both of these high priority improvements to aid in downtown's economic vitality.

The City's Street Design Manual has become the City's de facto guide to identifying the context-sensitive design for the six identified street typologies. Boardman Avenue is identified as a Downtown Street between Front and Eighth Streets. This street typology calls for 10-11' travel lanes and a 5-8' bike lane where bike lanes are present.

STREET TYPES

STREET TYPES WHAT DOES IT MEAN?

STREET CLASSIFICATION

This design manual outlines the overall city street design requirements for Traverse City streets and describes street functionality by the type of street in order to best meet the needs of current and future development in the city.

Traditional street classifications are based on the Federal Functional Class system that categorizes streets as "arterial," "collector," and "local." These classifications are primarily based on traffic conditions and operational characteristics.

While Traverse City streets may function like traditional streets, their history, location, context, use, and purpose vary from the traditional model. To better accommodate these differences and design streets that will better serve the residents of Traverse City, a new system of street typologies was created.

NEW STREET TYPES

The new system of city street typologies created for Traverse City is illustrated in the map on the following page and includes the street types listed below:

- Downtown Street
- Commercial Corridor
- Connector Street
- Formal Residential Street
- Informal Residential Street
- Park Lane Street
- Private Street
- Industrial Street
- Alleys
- Shared Street

These new city street types are described in further detail on the following pages, including their associated contexts, functions, and desired composition. The illustrations that accompany each street type are representative of those elements that make up the specific typology, and include ranges for appropriate dimensions of relevant street design features.

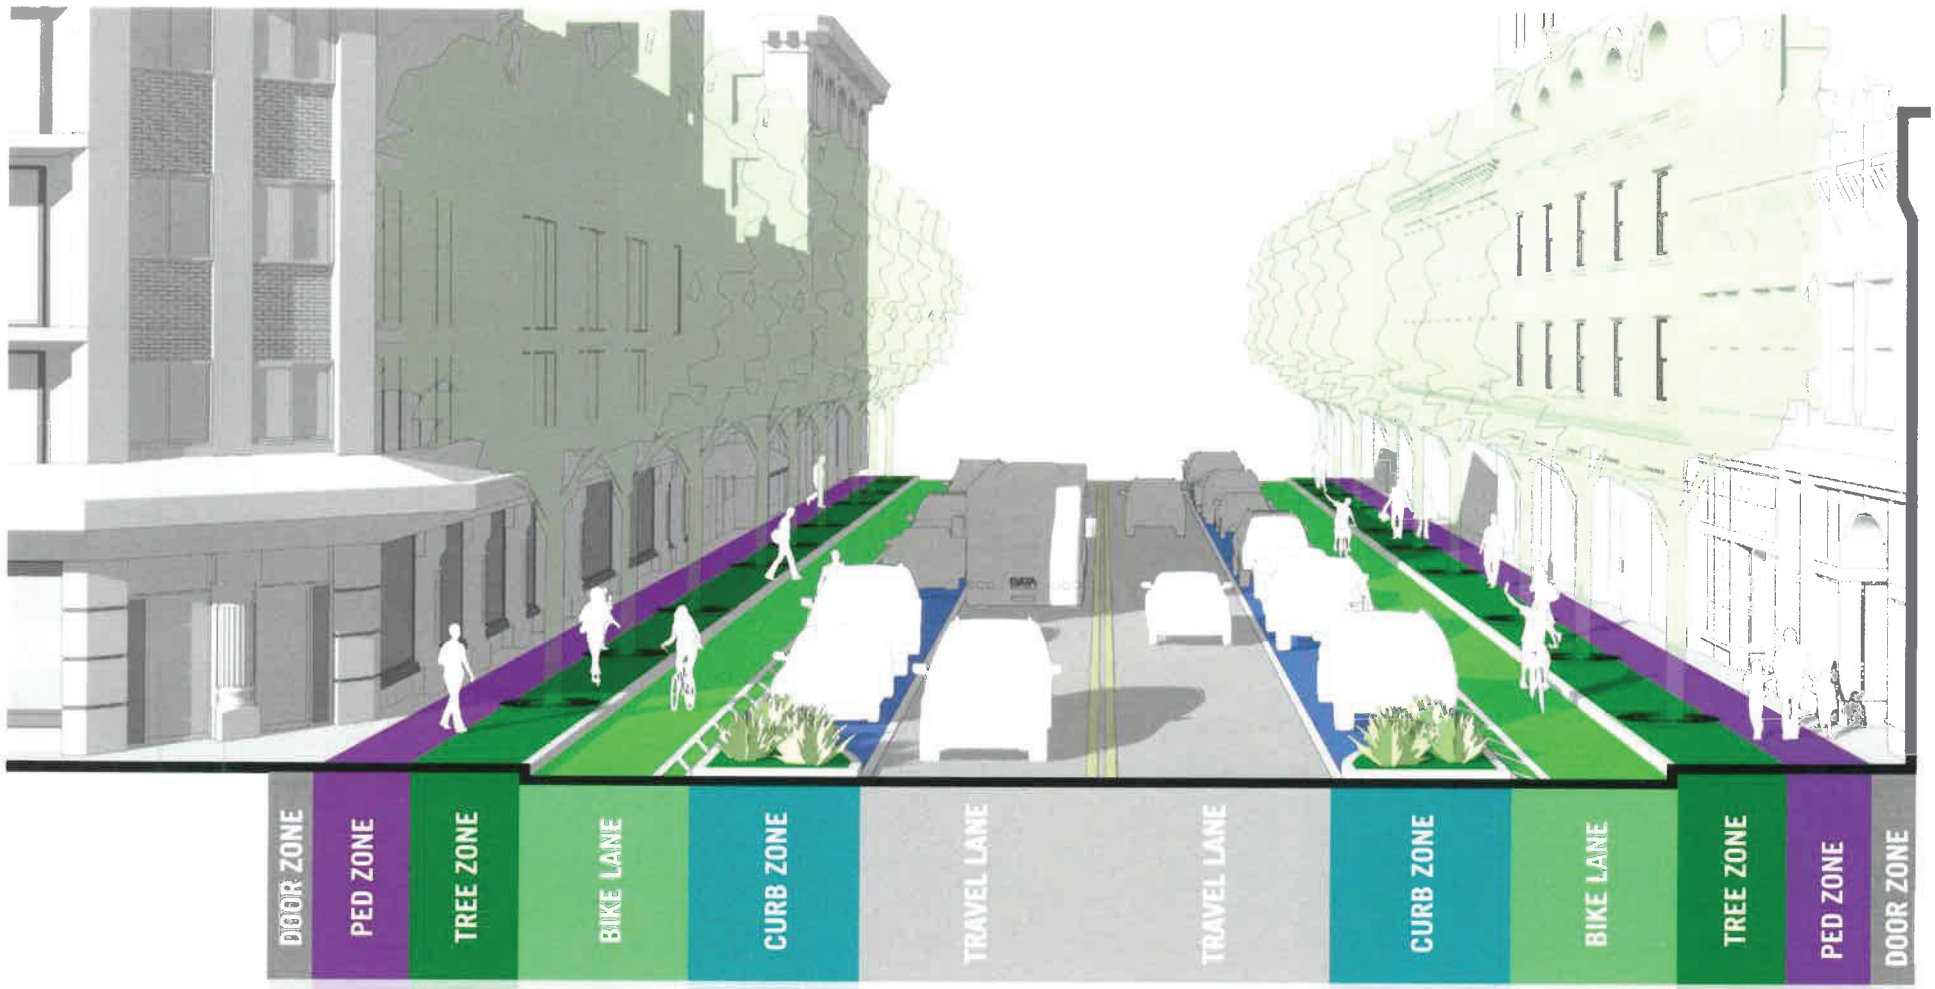
These dimensions represent the preferred standards for those design features, but may not be feasible in all situations. Engineering judgement may be required to adjust design dimensions to fit within the constraints of existing street conditions. The default design, however, is for a complete street that addresses the needs of the pedestrians first before designing other users for the street.

Typically street rights-of-way are 66 feet wide. The right-of-way typically includes travel lanes, sidewalks, street trees and public utilities. Alley rights-of-way are typically 33 feet wide.

STATE HIGHWAYS

State Highways are designed, managed, and maintained by MDOT and are subject to Federal and State highway design standards.

The State and Federal highways that travel through the city are US 31, M-72, and M-37 and are mainly the connector and commuter routes into and out of the city. US 31 has several distinct designations. US 31 is listed in the National Highway Systems, is a State Corridor of Significance, is a national truck route, and is classified as a principal arterial highway.



Preferred Standard	2'	5-9'	3-7'	5-8'	7'	10'	10'	7'	5-8'	3-7'	5-9'	2'

minimum 64', maximum 86'

NOTE:

1. Curb zone can include parking, loading, etc. On-street parking areas in the curb zone may include permeable pavers for stormwater filtration. Planted bump-outs in the curb zone are another option to include stormwater infrastructure.
2. Door zone is typically private property due to 2.5-foot building setback
3. Typical right-of-way is 66 feet wide.

Downtown Street

CONTEXT

Downtown is the most formally and intensely developed of the two types of commercial neighborhoods in Traverse City. The focus is on high intensity, regional, commercial, street-oriented activity. The overall level of intensity generated within downtown is the highest of all neighborhood types. This includes mixes of uses and 24-hour and late night services.

FUNCTION

Downtown streets are utilized to access mixed use and commercial areas. These streets typically carry a higher volume of low-speed travel and have more pedestrians and bicyclists. Transit is also an active component of these areas and inter-modal connections are prioritized.

COMPOSITION

The pedestrian zone is defined and enhanced through wider sidewalks, mid-block crosswalks, human-scale lighting, benches, bike parking, and civic spaces. Urban-like plazas are present and can include outdoor cafes, public gardens, public art, and other enhancements. Trees flank downtown streets to provide shade and to enhance the streetscape. Traffic calming measures are incorporated to slow vehicles while providing additional space for sitting and dining along the streets. Parking is typically provided on both sides of the street and parking spaces are typically delineated with striping and meters. Angled parking may be appropriate where the right-of-way width allows.

Curb and gutter is standard on this type of street and drainage is properly accounted for by using green infrastructure and best management practices.

PROJECT/PROGRAM NOMINATION FORM

Transit agency legal name: City of Traverse City

Agency contact person: Zach Cole

Proposed project: 14th St

Local agency project rank: 1

Fiscal year funding is requested: 28-29 Proposed let date: spring 2028

Major route:

Project limits: Division Street to Railroad Crossing

Length (in mi.): 0.85 ■ Project area map attached?

Project description: Mill crown correction, and Overlay, ADA ramp upgrades.

Project Conditions

PASER rating: 3 Remaining Service Life (RSL): 4-10 years

Is this project 100% preserve? ■ Yes ☐ No

Is this a preventative maintenance project? ■ Yes ☐ No

☐ Please attach a description of the preventative maintenance fix(es) since the last reconstruction. Describe the fix(es) and include the year the fix(es) was/were completed.

Does this project have a capacity change? ☐ Yes ■ No
If yes, please attach travel analysis in pdf format.

Traffic Volume (AADT): 17159 Freight Traffic Volume (CAADT): 1,373

Estimated % Commercial Traffic: 8% On MTP Freight Route? ☐ Yes ■ No

Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route? ☐ Yes ■ No

Functional Class: Minor Arterial Year of last improvement: 2006

Description of last improvement: Overlay existing asphalt Division to Cass the R.R. Tracks, see project description

Funding

Federal Non-Participating Work?

☒ Yes ☐ No

Advance Construction Funding?

☐ Yes ☐ No

If yes to either question, please explain: See description

If you have a preferred funding source, check box: ☒ STP ☐ CMAQ

Proposed Participating Cost	$ 1,127,000	Proposed Federal	$ 1,100,00
Proposed Non-Participating Cost	$ 210,000	Proposed State	$ 0
Total Project Cost	$ 1,337,000	Proposed Local	$ 0

Planning

Project Listed in the TTCI Metropolitan Transportation Plan (MTP)? ☒ Yes ☐ No ☐ N/A

Project Identified in Local Plan? ☒ Yes ☐ No (If "Yes," please attach pages from plan)

Project Conforms to Complete Streets Policy? ☒ Yes ☐ No ☐ N/A

Describe existing and future non-motorized facilities within the project limits/additional comments/exception rational:

See attached project description

Project located in Environmental Justice Area? ☒ Yes ☐ No

If yes, please include the MiEJ Environmental Justic Score: >40-50

Please attach a map/screenshot from MiEJScreen Mapping Tool

Safety

Number of crashes per MVMT/MEV: 4.5

Does the project fix the identified correctable safety issues? ■ Yes ☐ No

Describe how the project fixes identified correctable safety issues:

Pedestrian visability will be enhanced at the intersections along with crown corrections reducing the slope from beyond acceptable to within MDOT tolerances.

Assessment

If the answer is "Yes" to any of the following criteria, provide additional explanation in an attachment. Please consider the following factors when completing the work description:

Regional Benefit – Is there a benefit beyond the project to the area wide transportation system or region?	■ Yes ☐ No
Connectivity – Does the project add or enhance a road connection between two or more existing roadways functionally classified as a Major Collector or higher; OR add or enhance connections between two or more pathway corridors or transit routes?	■ Yes ☐ No
Environmental Justice – Is the project located within an identified EJ area and are no adverse impacts projected?	■ Yes ☐ No
Complete Streets – Does the project contain enhancements to serve pedestrians, cyclists, and/or transit users?	■ Yes ☐ No
Transit – Will the project improve service, efficiency, and attractiveness of public transit?	■ Yes ☐ No
Green Infrastructure – Does the project involve the use of stormwater best management practices?	■ Yes ☐ No
Environment – Does the project contain elements to preserve, mitigate, or enhance an environmentally sensitive area?	■ Yes ☐ No
Economic Development – Does the project support job creation or growth?	■ Yes ☐ No
Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route?	☐ Yes ■ No
Safety – Can the project be shown to do one or more of the following: reduce fatalities and serious injuries; reduce nonmotorized crashes; enhance transit safety?	■ Yes ☐ No

Narrative

Please attach a narrative for the project and be certain to address the following specific issues:

Local Municipality Infrastructure Coordination: May include projects that cross jurisdictional boundaries, utilize grant funding that must be expended within a limited time-frame, bridge construction or culvert maintenance or replacement, projects being undertaken by public transit agencies or port authorities, rail or freight authorities, non-motorized projects, or projects that may be built concurrently with public utility projects.

Local Planning & Economic Development: Includes projects that are in local or regional plans (such as a Master Plan or other community development related plan) and has a significant impact on the local or regional economy. This may include areas with planned future land uses such that would increase density and traffic volume (high-density commercial, residential, or mixed-use developments).

Additional Information for consideration (if applicable):

- Current number of lanes
- Proposed number of lanes
- Current lane width
- Proposed lane width
- Total crashes on segment in last 3 years
- Drainage problem corrected?
- Replace/new bridge or culvert as part of project?
- Project benefits other modes (wide shoulders, separated nonmotorized facility done as part of project, correct hazardous intersection)

Acronyms/Definitions

AADT (Annual Average Daily Traffic) – Traffic metric that represents the average number of vehicles passing a specific point on a roadway per day over the course of a year.

CAADT (Commercial Annual Average Daily Traffic) – Traffic measurement that specifically tracks the average number of commercial vehicles such as trucks, buses, and delivery vehicles passing a certain point on a roadway per day over the course of a year.

MEV (Million Entering Vehicle) – Quantity of vehicles entering a specific point, location, or area over a given year, expressed in millions.

MiEJ Screen – A mapping tool developed by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) to identify and visualize areas in Michigan facing environmental justice concerns.

MTP (Metropolitan Transportation Plan) – A long-term, strategic document developed by a MPO to guide transportation investments and policies in a metropolitan region over a 20-25 year horizon.

MVMT (Million Vehicle Miles Traveled) – A common way to measure exposure in traffic safety. Crash rates are often expressed as crashes per million vehicle miles traveled.

RSL (Remaining Service Life) – Measure used to estimate the amount of time a roadway, bridge, or other infrastructure component will continue to perform its intended function before requiring significant rehabilitation, reconstruction, or replacement.

Fourteenth Street

- Regional benefit: Fourteenth Street serves as a minor arterial for its full length (0.85 mile) between Division Street and Lake Ridge Drive. Upgrading 14th Street will provide improved access to a regionally important commercial corridor as well as improving connections to the region via Division Street and Veterans Drive, and connections to downtown and the Grandview Parkway via Union and Cass Streets.

- Connectivity: The City's long-term plan is to develop a bike trail along Griffin Street connecting into the Boardman Lake trail and the greater TART trail system.

  In addition, 14th Street (a minor arterial) connects Division Street (a principal arterial) with Cass Street (a minor arterial). Improving these connections will contribute to network resiliency throughout the area.

  The non-motorized improvements along 14th Street (half a block south of the planned Griffin Street trail) will allow users to access the regional trail system. The improved crossings at the intersections will help to provide access to the planned regional trail connection through Griffin Street.

- Complete Streets: As noted, all crossings will include accessible ramps and controlled crossings as called for under the City's Mobility Action Plan**.** Complete street improvements are especially needed at the Pine and Maple intersections.

- Transit: This improvement project limits includes a BATA transit stop at 14th Street and Veterans Drive. This is part of BATA's Route 1 line connecting the Hall Street transfer station to Grand Traverse Mall. Users can access the full BATA service area through connecting routes and via the transfer station. Having improved pedestrian access and crossings along 14th Street to this stop will greatly improve access to transit for many current and potential future transit users.

- Green Infrastructure: There will be no infrastructure changes at this time.

- Environment: There are no planned environmental improvements at this time.

- Economic Development: Public infrastructure improvements along 14th Street will improve the congestion and turning hazards throughout the corridor. Enhanced access and improved safety for all users will benefit the businesses along the corridor and support economic development here.

- Freight: NA

- Safety: More narrow travel lanes (reducing vehicle travel speeds) and improved pedestrian crossings will undoubtedly improve safety throughout this project area.

Local Municipality Infrastructure Coordination Narrative

The City's newly adopted Mobility Action Plan (MAP) calls for the section of 14th Street from Cass Road to the Boardman Lake Trail/Lake Ridge Drive to be part of the proposed "Vision Bike Network". The MAP also calls for improved pedestrian crossing infrastructure at Division, Oak, Pine, Union, and Cass Streets along 14th Street. As noted above, the long-term plan is for the bike network to be routed along Griffin Street just north of 14th Street while improving the pedestrian experience and safety along 14th Street.

Local Planning and Economic Development Narrative

The City's Corridors Master Plan highlights 5 key corridors for future planning, among them is the 14th Street corridor. The Corridors Plan calls for significant redevelopment of underutilized properties and enhancement of the character of this corridor as well as gateway features at either end of the corridor. The Corridors Plan calls for a trail connection via Griffin Street in conjunction with the MAP. These sweeping changes are longer term in nature and require a multi-step approach as the City undertakes detailed visioning and related zoning changes to fully realize the Corridor Master Plan's vision. While the City works towards these longer term elements, the 14th Street corridor must be maintained to prolong the street's functional lifespan. All current improvements should be made with the longer term goals in mind. To this end, storm water upgrades are proposed as part of this project along with improved complete streets infrastructure at several crossings.

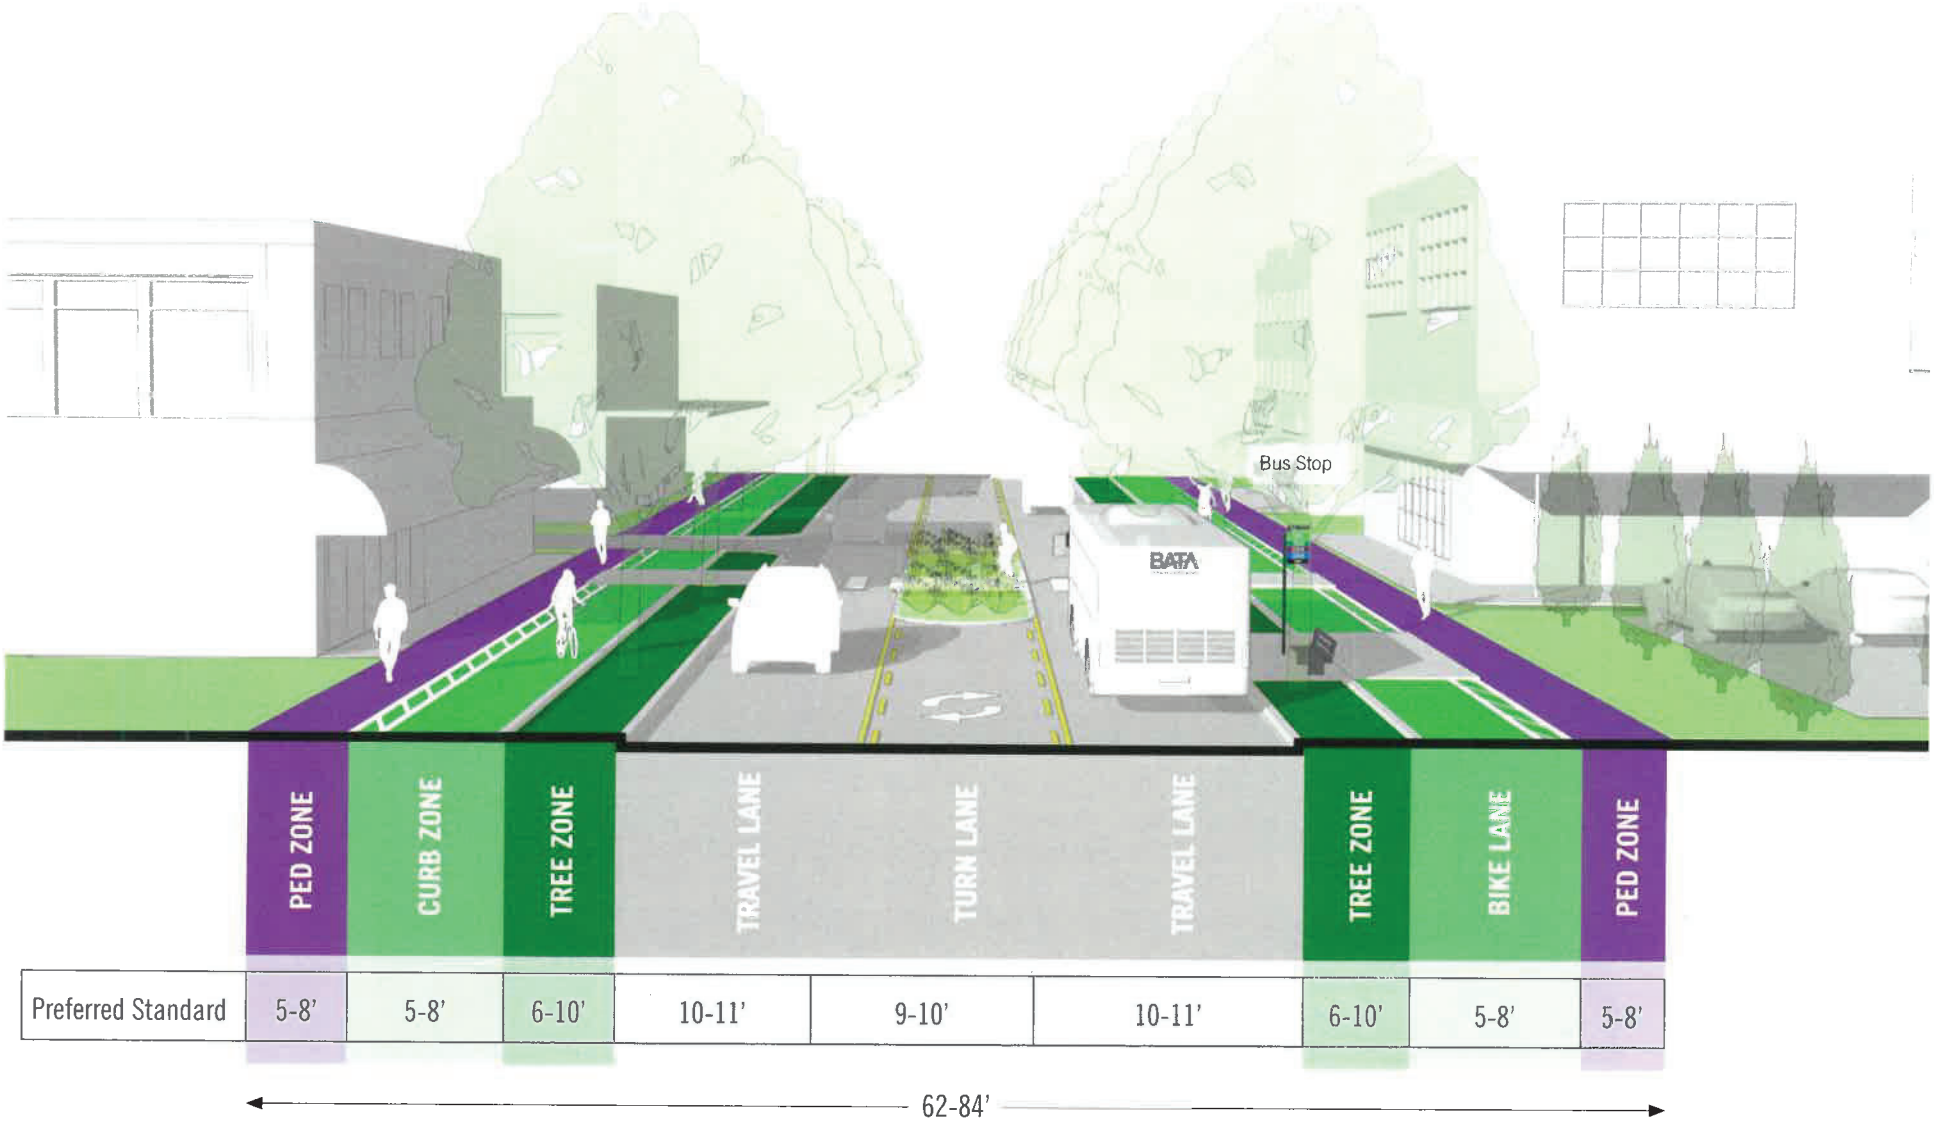
STREET TYPES



Preferred Standard	5-8'	5-8'	6-10'	10-11'	9-10'	10-11'	6-10'	5-8'	5-8'

62-84'

NOTE:

1. Curb zone can include bike facilities, parking, loading, etc. On-street parking areas in the curb zone may include permeable pavers for stormwater filtration.
2. Most right-of-ways are 66 feet wide.

Commercial Corridor Street

CONTEXT

The land use and development context adjacent to Commercial Corridors in Traverse City includes commercially and industrially focused uses as well as higher intensity and larger scale residential buildings. These areas are less formally developed of the two types of commercial neighborhoods within the city with a focus on commercial and building innovation.

FUNCTION

Commercial Corridor streets serve as key travel routes for moving both goods and people. They may be characterized as city thoroughfares, providing direct access through the city to major destinations. These streets provide access to commercial and mixed use areas and provide an connection for all users. Frequent transit and transit stops are very apparent along Commercial Corridors.

COMPOSITION

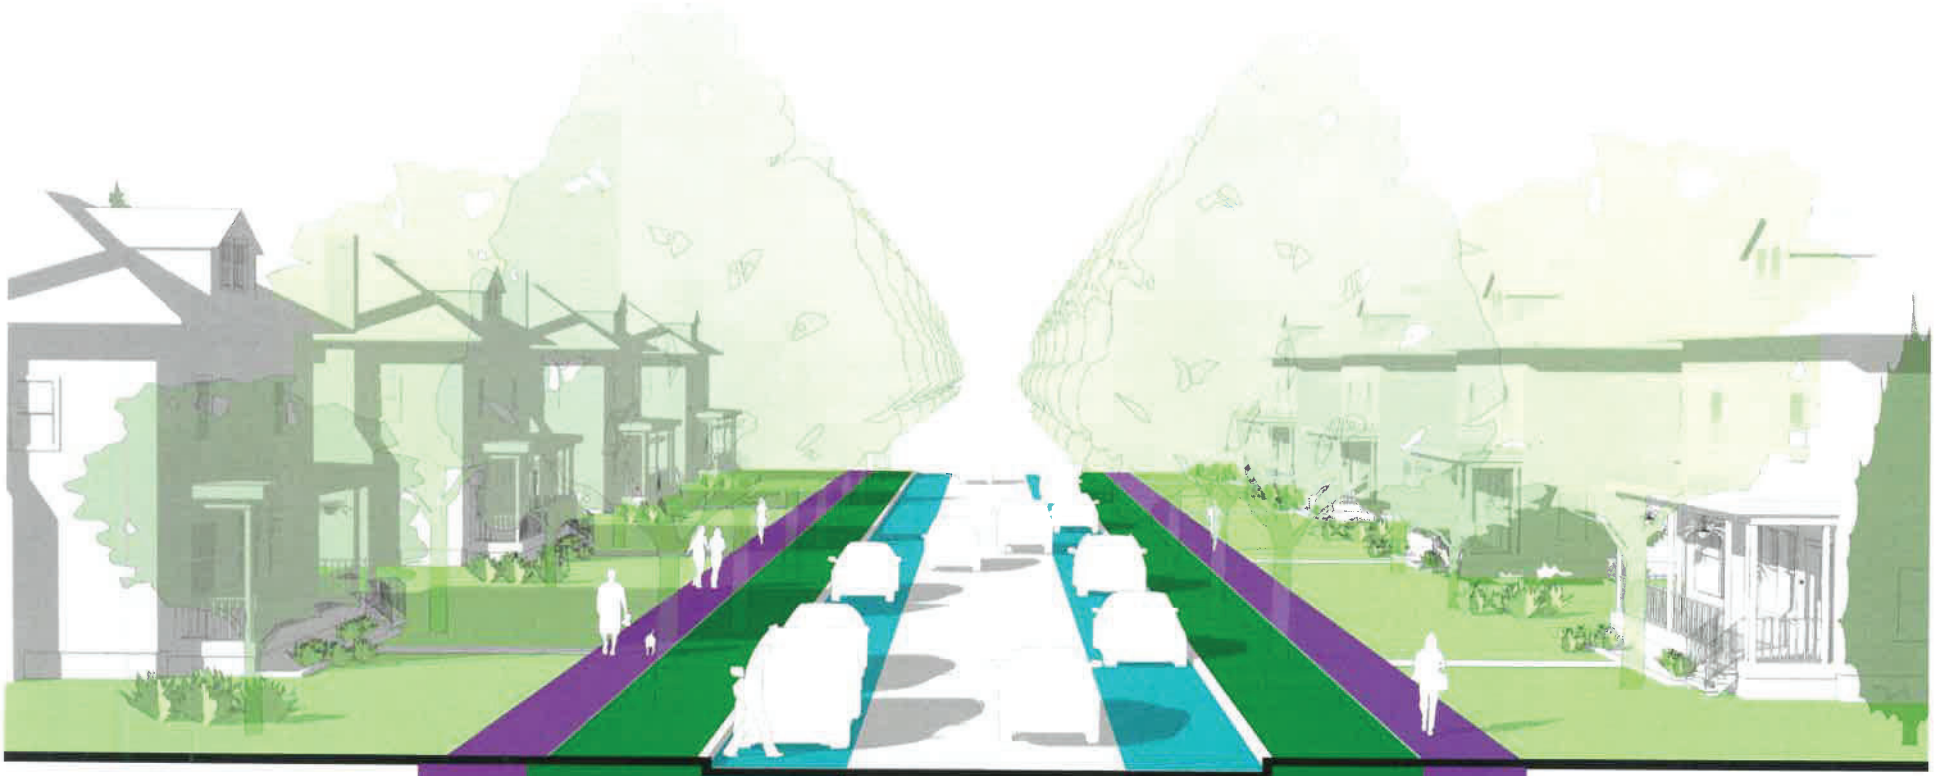
These streets are typically characterized with two or more travel lanes delineated with striping. These streets are used as transit routes with designated bus stops with shelters. Sidewalks are provided on both sides of the street. On blocks longer than 600 feet, a mid-block crosswalk is necessary to make pedestrian crossing the street more direct and safer. Protected bike lanes and/or shared use paths are provided to accommodate bicyclists, either on-street or off-street, depending on right-of-way constraints.

Street lighting is present in areas to delineate character transitions and at intersections. On-street parking may be provided.

These streets are typically constructed with curb and gutter. Large canopy street trees give vertical dimension to help define the street edge. Drainage is properly accounted for by using green infrastructure and other best management practices. Utilities are typically provided within the right of way and overhead lines buried.

Example Commercial Corridor - East Eighth Street

Example Commercial Corridor -East Eighth Street



Preferred Standard	5-8'	6-10'	4-7'	20'	4-7'	6-10'	5-8'

Typical 66'

NOTE:

1. Curb zone can include bike facilities, parking, loading, etc. On-street parking areas in the curb zone may include permeable pavers for stormwater filtration.
2. Typical right-of-way is 66 feet wide.
3. Streets less than 30 feet wide allow for parallel parking on one side only.

Formal Residential Street

CONTEXT

Formal Residential streets are the streets that typically serve the older urban neighborhoods within Traverse City. These areas are the most formally developed of the two types of residential areas within the City with a focus on historic patterns. The level of intensity generated within this areas includes closely-spaced dwellings mixed with complementary neighborhood services.

FUNCTION

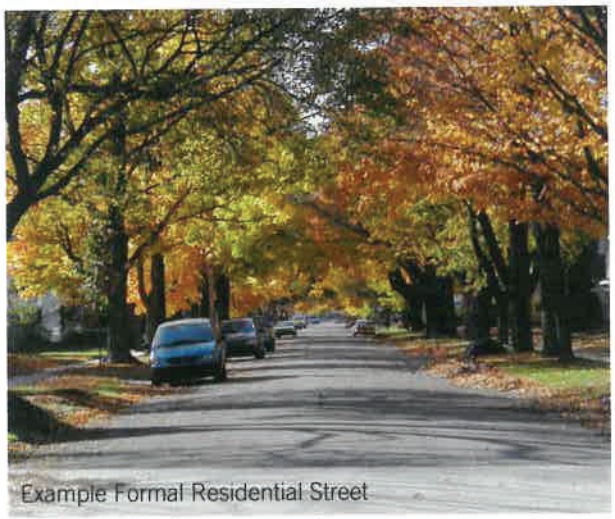
Formal Residential streets provide access to, in, and through residential neighborhoods. These are typically narrow, low-volume streets with a complete sidewalk network that connects residents to the larger transportation network. These streets often have parallel alleys that provide rear access to garages or private parking areas for the residents. The absence of driveways coming from the street enhances the walking environment by removing vehicle/pedestrian conflicts along the sidewalks.

COMPOSITION

Sidewalks are provided on both sides of the street and are detached from the curb to allow for a tree lawn with large canopy street trees. Parking is allowed on these streets which can aid in keep traffic speeds slower. Traffic calming measures are appropriate, especially on long blocks or on streets that were constructed wider than necessary. (See page 42 for Traffic Calming measures.) Street lighting is provided at intersections and in some areas low level pedestrian scaled lighting is provided.

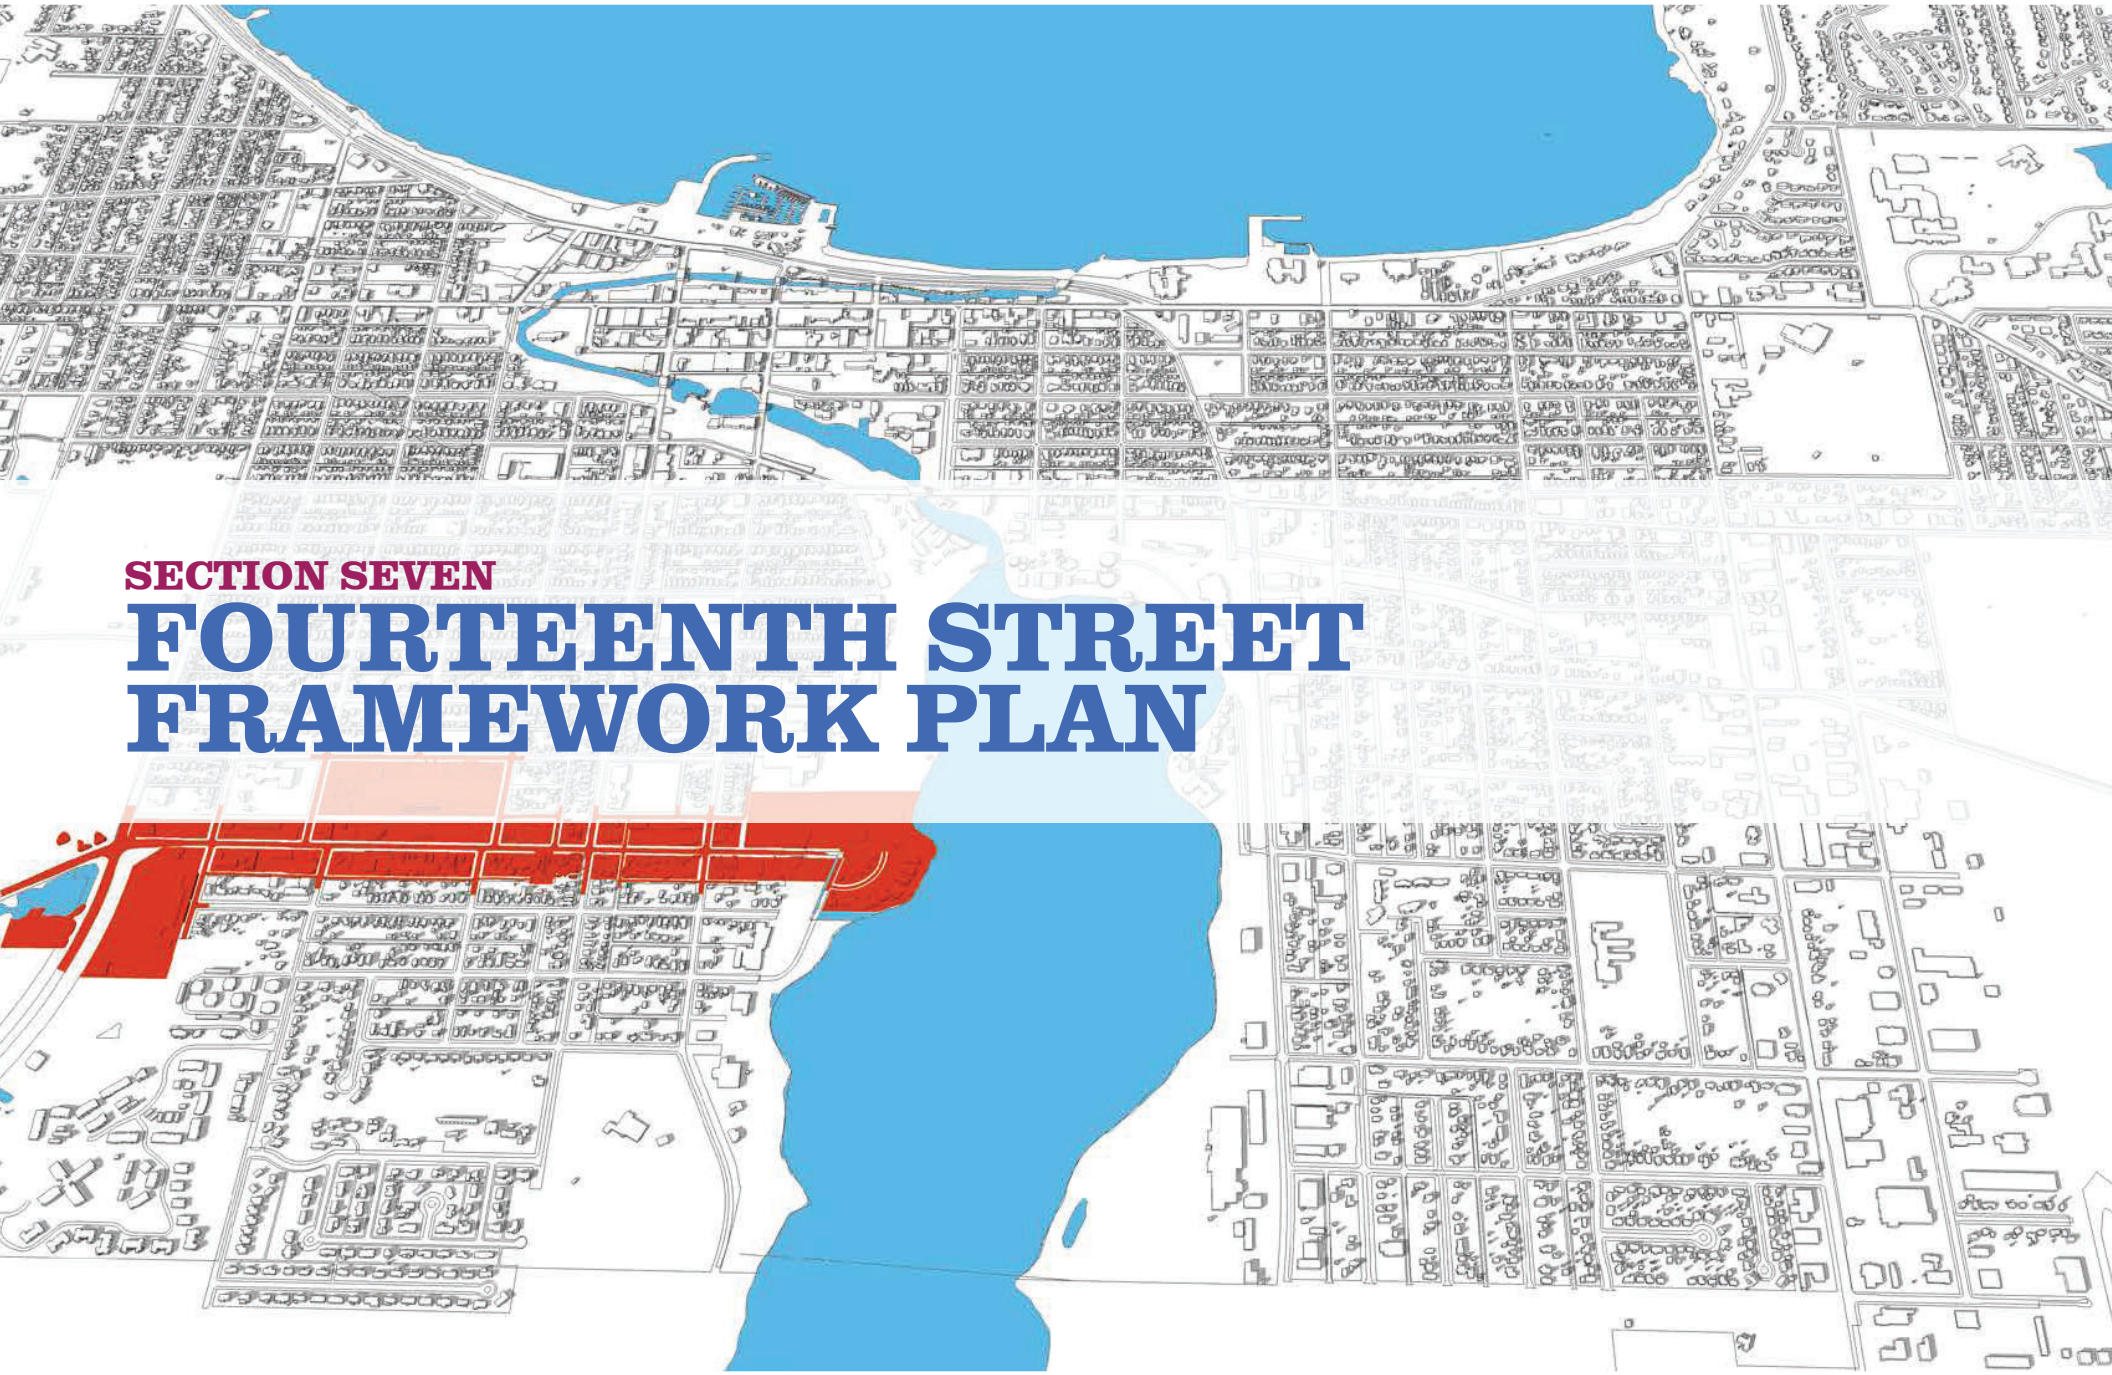
Curb and gutter is standard on these types of streets and drainage is properly accounted for with green infrastructure and best management practices. Curb cuts for driveways onto the street are not allowed if alley access is available for new construction or major property renovation.

Typically water main and storm sewer utilities are located in the street right-of-way, while sanitary sewer service is provided in the alley.



Example Formal Residential Street

Example Formal Residential Street



SECTION SEVEN

FOURTEENTH STREET FRAMEWORK PLAN

EXISTING CONDITIONS

FOURTEENTH ST

The Fourteenth Street Corridor extends from Division Street on the west to Boardman Lake on the east and serves as an important transportation link in the City.

Along its length, Fourteenth Street has several different "character areas," each influenced by traffic volumes, existing land uses, proximity to Boardman Lake, traffic volumes at key intersections and other factors that will increase each area's potential.

The Framework Plan for Fourteenth Street presents a guide for land use along the Corridor and identifies potential development and redevelopment opportunities. Specific recommendations for site and right-way improvements are provided to enhance the Corridor's appearance and character. Transportation related recommendations are also presented on the following pages to improve mobility along the corridor for motorist, pedestrian, and cyclists.

Sidewalks *Although sidewalks with parkways are continuous along the south side of corridor, there are limited sidewalks on the north side. Several gaps in the network frustrate pedestrian movement and the sidewalks fail to connect to the trail network west of the corridor.*

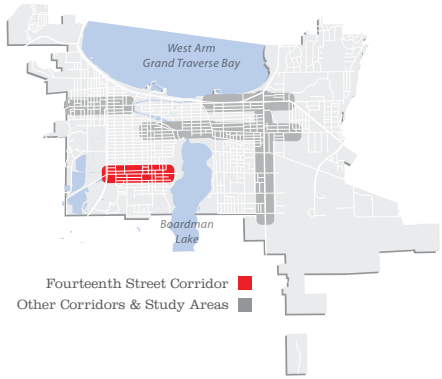
Intersections *While most intersections along Fourteenth Street function well, queuing and delays can be experienced at Division Street. Even though Division was recently upgraded, delays at this major intersection impact access to businesses.*

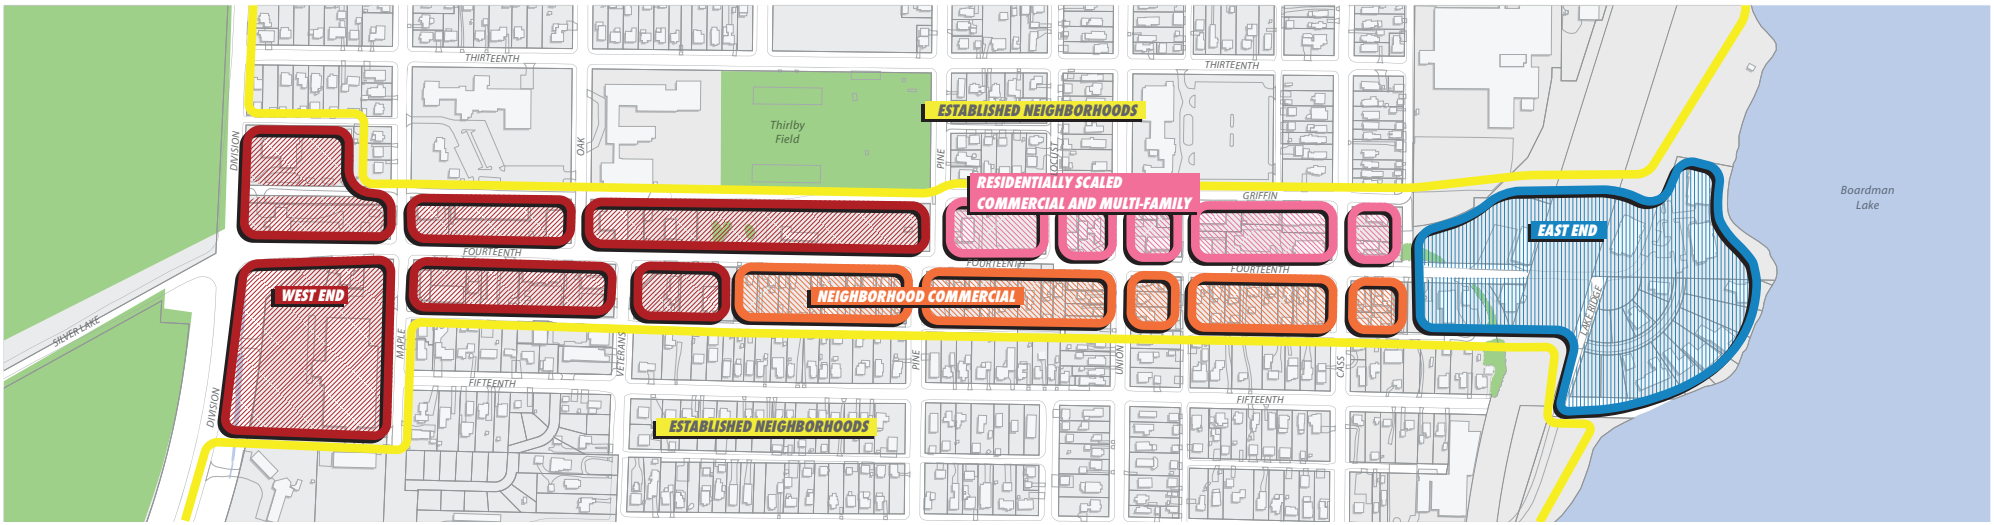
Roadway *Fourteenth Street is a three lane cross section, with one travel lane provided in each direction plus a center turning lane. There are signalized intersections at Division Street, Veterans Drive, Union Street, and Cass Street. Veterans Drive is T-Intersection and a jogged traffic movement is evident with north-south traffic utilizing Oak Street to continue north.*

Access Management *Even with a center turning lane, access management along the Fourteenth Street Corridor is limited, resulting in left turn conflicts for vehicles and driveways/pedestrians. Access management is an important consideration for the Fourteenth Street Corridor. By eliminating redundant driveways, consolidating curb cuts, and connecting adjacent parking lots, the function and safety of Fourteenth Street can be improved.*

ADA Compliance *The Americans with Disabilities Act has created a set of guidelines to ensure that transportation infrastructure is constructed to standards that ensure accessibility for the disabled. Although sidewalks exist along Fourteenth Street, there are areas of non-compliance due to the lack of curb ramps, sidewalk width, and sidewalk obstructions, not to mention missing sidewalk segments.*

Bicycle Lanes *Currently, there are no bike lanes along the corridor. Designated bicycle lanes on a street provide a dedicated area of the roadway for bicycles. In addition to providing a safer environment for bicycles, bike lanes also provide more separation between traffic and sidewalk, further buffering pedestrians from moving cars.*





500 feet

CHARACTER AREA FRAMEWORK

FOURTEENTH ST

Along each corridor there exists a range of different "character areas", defined by components such as functionality, development pattern, parking, building height, land use, appearance, development potential, and overall character. These different character areas are united by the corridor itself, yet each provides distinct environments that help define the unique experience to be had at different locations along the corridor's run. Together, the four (4) different areas along Fourteenth Street represent the full range of land uses and development patterns are provide a variety of development and improvement opportunities for the corridor.

West End *The west end of Fourteenth Street is a busy commercial area, activated by traffic along Division and Fourteenth and activity generators such as Tom's Food Market and Thirlby Field. As a gateway to the City, development should be attractive and help shape a positive perception of the community. Commercial uses should cater to nearby residents and passing motorists. This area should be positioned to maximize its potential as a major commercial node by encouraging larger scale comprehensive development. However, this type of development would require property assemblage, which is complicated by small parcel sizes and multiple property owners. Buildings should be one to three stories in height, although, depending on use, four to five stories could be appropriate to catalyze a larger redevelopment effort.*

Built Form	*Large and mid-scale commercial buildings with strong visual impacts. Although serving motorists, properties should also be accessible to pedestrians. Assembling smaller parcels into larger redevelopment lots is desirable when possible.*
Parking	*Parking should be provided behind buildings.*
Height	*1-3 stories, although 4-5 stories could be appropriate on prominent properties.*
Uses	*High activity, destination commercial uses. Residential is not desired on the ground floor due to the area's role as a gateway.*

Neighborhood Commercial *The north side of Fourteenth and Cass and Fourteenth and Union intersections should be maintained as a small commercial node. Uses should consist of local convenience and neighborhood oriented retail, including service and professional office uses catering to the needs of nearby residents. Development should be one to three stories in height and be respectful of adjacent land uses. Consideration could be given to extending commercial land uses to the south side, either as a residential conversion (see below) or as a dedicated commercial use, but development should not adversely impact the adjacent residential areas.*

Built Form	*Buildings at or near the sidewalk and front property line. Building scales should respect established residential areas. Homes to the south are possible candidates for conversion to commercial.*
Parking	*Parking should be provided in the rear of buildings if possible, otherwise in the side yard screened from Fourteenth Street with landscaping and a low masonry wall.*
Height	*1-3 stories.*
Uses	*Small-scale retail, service, and office commercial in character with existing residential neighborhoods.*

Residentially Scaled Commercial and Multi-Family *Situated between busier commercial nodes along the corridor, these areas are appropriate for multi-family residential, low-intensity commercial, or a combination of both uses in the form of mixed-use development. Regardless of land use, development should be residentially scaled and one to three stories in height. An excellent example of appropriate residentially scaled development is Cass Street Ear Nose and Throat which is one story with residential architecture.*

Built Form	*Buildings at or near the sidewalk and front property line. Residentially scaled, matching established neighborhoods.*
Parking	*Parking should be provided in the rear of buildings if possible, otherwise in the side yard screened from Fourteenth Street with landscaping and a low masonry wall.*
Height	*1-3 stories.*
Uses	*Mix of uses tending toward residential, including multi-family, small-scale residential, and mixed-use buildings with both.*

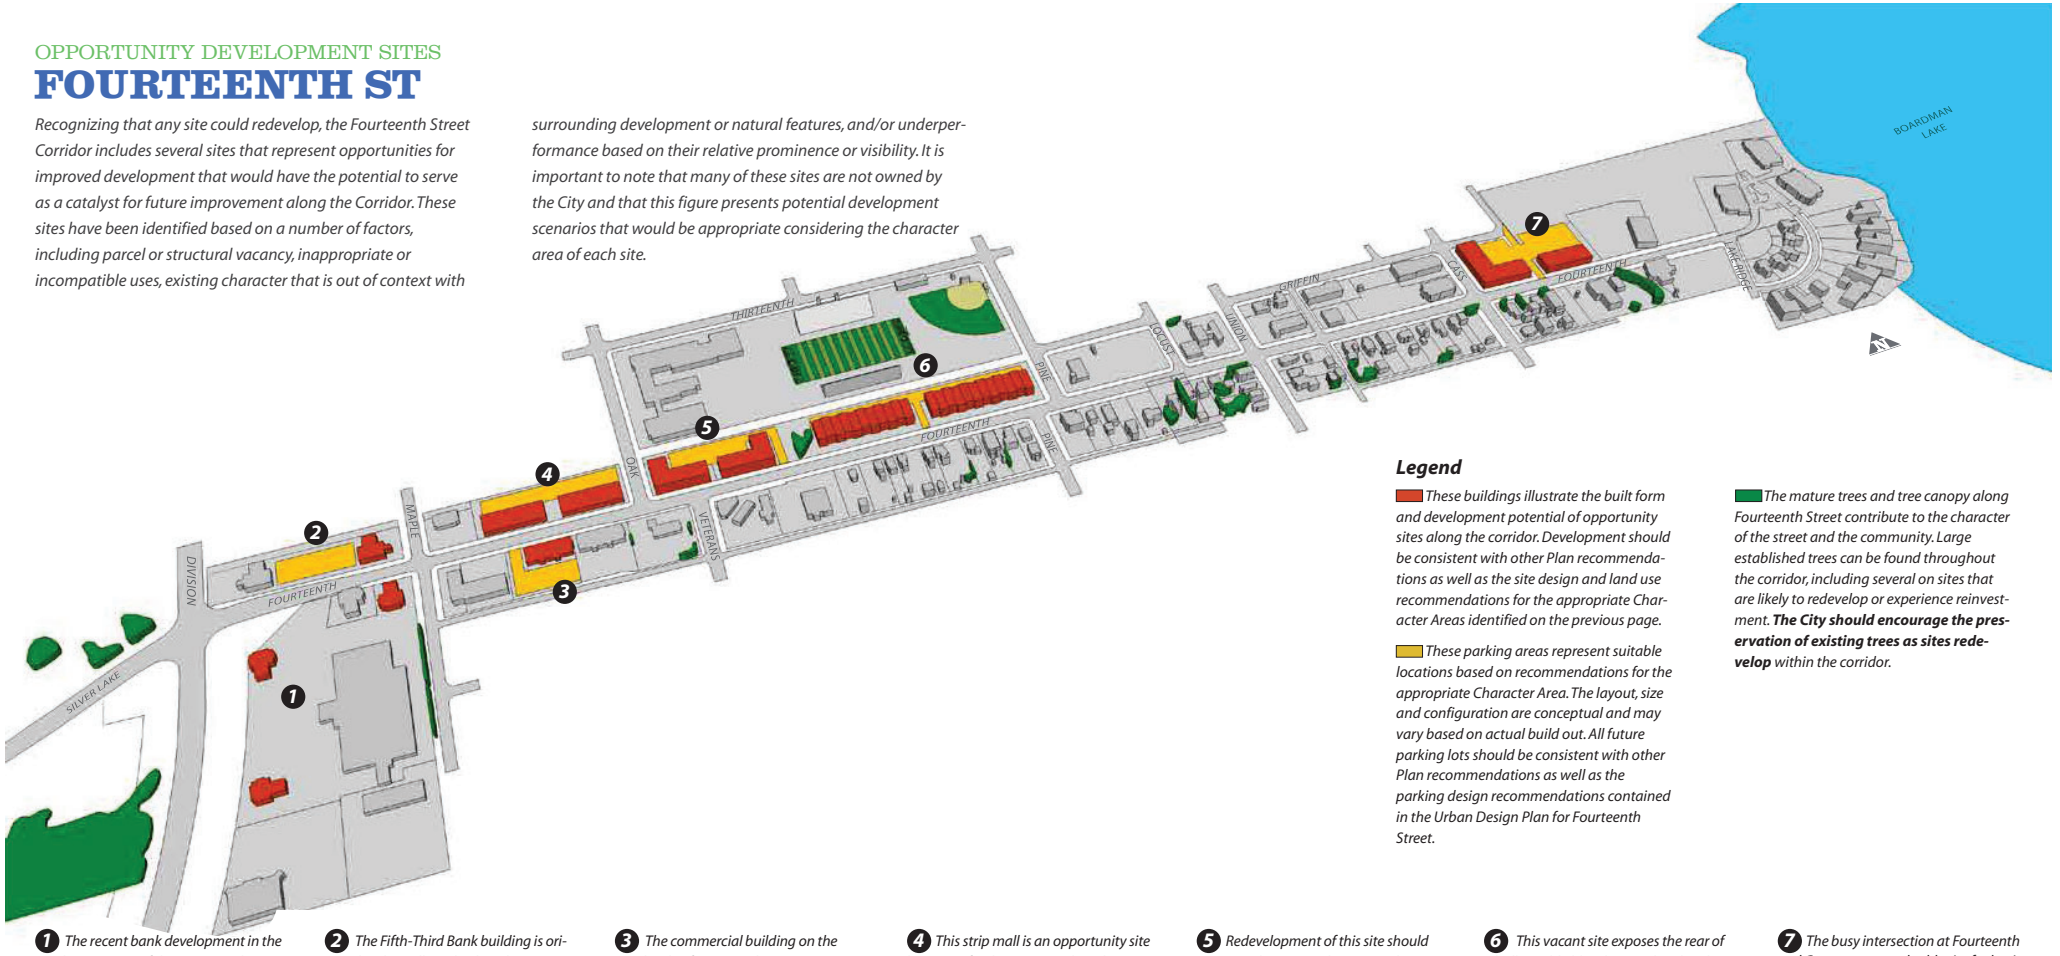
East End *Development at the east end of the corridor should maximize the potential of the area along Boardman Lake, the activity around the Cass Street intersection, as well as the potential Boardman Lake Avenue. Residential densities should reflect the new mixed-density residential development at the east end of Fourteenth Street. Buildings should be one to three stories in height. At the intersection of Cass and Fourteenth, buildings should be placed close to the street to "frame" the intersection and create an active pedestrian friendly node.*

Built Form	*Buildings at or near the sidewalk and front property line. Special attention should be paid to properties on the lakefront and key intersections.*
Parking	*Provided in existing parking garage if capacity permits, otherwise in the rear of buildings.*
Height	*1-3 stories.*
Uses	*Mix of uses throughout, including retail, service, office, and residential. Residential densities near the lake should match recent developments.*

OPPORTUNITY DEVELOPMENT SITES

FOURTEENTH ST

Recognizing that any site could redevelop, the Fourteenth Street Corridor includes several sites that represent opportunities for improved development that would have the potential to serve as a catalyst for future improvement along the Corridor. These sites have been identified based on a number of factors, including parcel or structural vacancy, inappropriate or incompatible uses, existing character that is out of context with surrounding development or natural features, and/or underperformance based on their relative prominence or visibility. It is important to note that many of these sites are not owned by the City and that this figure presents potential development scenarios that would be appropriate considering the character area of each site.



Legend

These buildings illustrate the built form and development potential of opportunity sites along the corridor. Development should be consistent with other Plan recommendations as well as the site design and land use recommendations for the appropriate Character Areas identified on the previous page.

These parking areas represent suitable locations based on recommendations for the appropriate Character Area. The layout, size and configuration are conceptual and may vary based on actual build out. All future parking lots should be consistent with other Plan recommendations as well as the parking design recommendations contained in the Urban Design Plan for Fourteenth Street.

The mature trees and tree canopy along Fourteenth Street contribute to the character of the street and the community. Large established trees can be found throughout the corridor, including several on sites that are likely to redevelop or experience reinvestment. ***The City should encourage the preservation of existing trees as sites redevelop*** *within the corridor.*

1 *The recent bank development in the northern section of the Tom's Food Market parking lot is a creative approach to repurposing underutilized pavement along Fourteenth Street. A similar opportunity for additional areas for new convenience/retail commercial uses may exist in other areas of the site. Any development should integrate new parking and cross-access with what already exists, and should not negatively impact Tom's Food Market by obscuring views, eliminating necessary parking spaces, or making access difficult.*

2 *The Fifth-Third Bank building is oriented awkwardly with a long linear parking lot and drive-thru consuming valuable street frontage along Fourteenth Street. Reconfiguring the lot and drive-through would allow for development on the east end of the site of a new convenience, retail, or service commercial use that compliments the surrounding neighborhood. Parking for the new development should be shared with the bank and screened from Fourteenth Street with a low masonry wall and landscaping.*

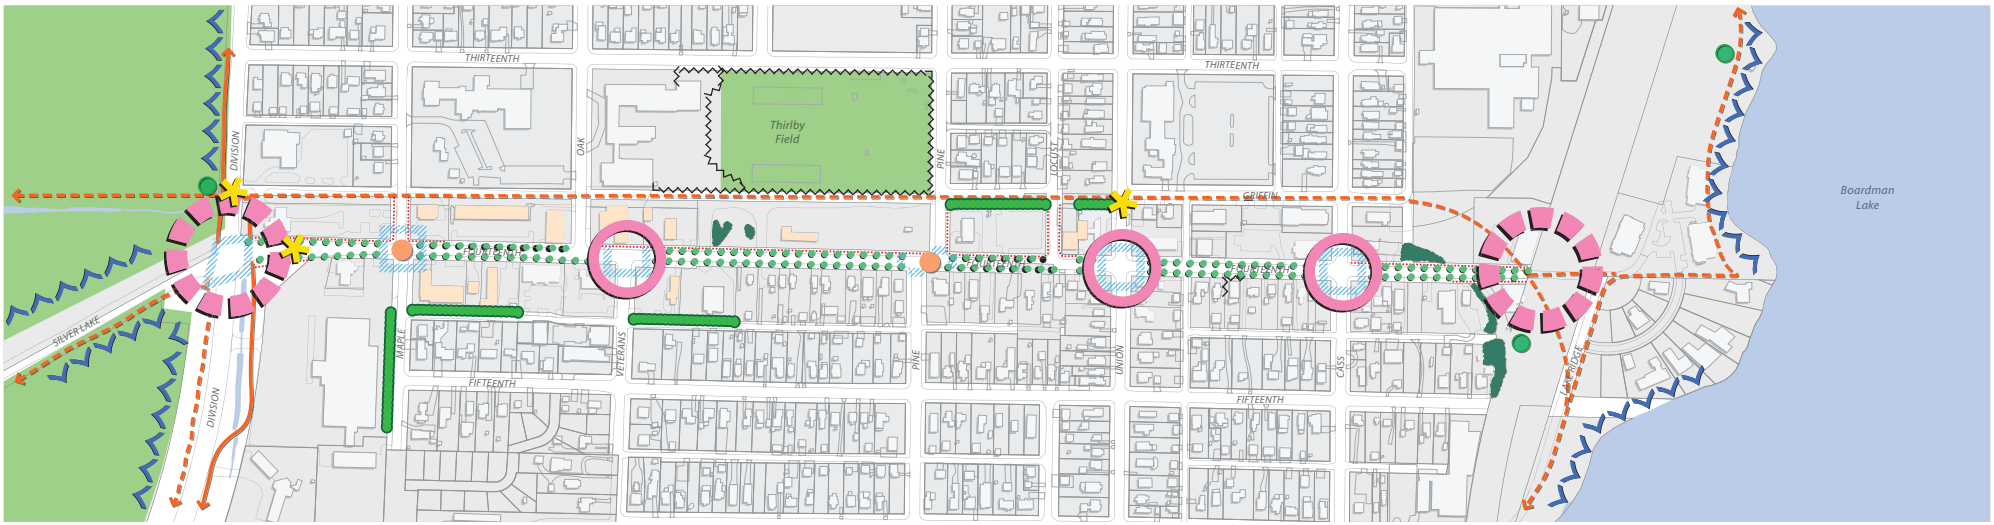
3 *The commercial building on the south side of Fourteenth Street is serviced by a rear alley that is not being used to improve circulation, and is oriented so as to provide tenants little visibility from the corridor. The site should be reconfigured to have a strong presence on Fourteenth Street and parking in the rear that is accessible from the alley and adjacent lot to the east. A neighborhood-scale commercial use should be targeted for this opportunity site, potentially by extending it westward to Maple Street and including the nearby commercial buildings.*

4 *This strip mall is an opportunity site because of its large size and single owner. Although the uses are appropriate for its location and the site is unlikely to change in the short-term, the owner should consider long-term improvements to the layout. Removing the eastern building would create a continuous view of the main building from Fourteenth Street, and incorporating the existing 7-11 to the east would enhance the redevelopment scenario. Parking should be provided midblock or in the rear, and should be screened with a low masonry wall and landscaping.*

5 *Redevelopment of this site should prioritize the west end uses at Oak Street, but consider incorporating Leone's Frosty Treat, a seasonal business closed in winter months. New development should be more compatible with the adjacent school and the Fourteenth Street corridor. Appropriate uses include commercial, office, or possibly mixed-use with residential upper floors. Alley accessed rear parking, while ideal, might conflict with school traffic patterns. The east end of the site might therefore be needed as visitor parking.*

6 *This vacant site exposes the rear of Thirlby Field's bleachers and makes this section of Fourteenth Street feel vast and desolate. Redevelopment should contribute to the Corridor's streetwall while preserving and incorporating the existing trees. The current single family zoning may be limiting the site's potential and how this site is perceived by the school. On the east end, either row houses or multi-family units, could transition to commercial uses that are more appropriate for the site's west end. The parcel's shallowness may require parking to be provided midblock, screened with a low masonry wall and landscaping.*

7 *The busy intersection at Fourteenth and Cass creates a valuable site for businesses seeking high visibility, convenient access, and potential connection to the planned Boardman Lake Avenue. The site's existing uses could be relocated to more appropriate, less prominent locations in the City. New development could include unused parts of the Cone Drive Gearing Solutions site and the proposed decommissioned railroad right-of-way, reconfigured to front Fourteenth Street. An office or commercial service use with multi-family upper stories would be appropriate at the intersection and along Cass Street, with parking in the rear.*



URBAN DESIGN FRAMEWORK

FOURTEENTH ST

The Urban Design Framework Plan provides a framework for the actions and improvements to enhance the appearance, function, and overall vitality of the Fourteenth Street Corridor. Improvements and recommendations identified in the plan are recommendations affecting both the public and private realm. Some of the improvements are simple, less costly improvements that can be implemented more quickly, while others more costly that will require more detailed study, planning, and funding.

The intersection of Division Street and Fourteenth Street is a focal point of the corridor and anchors the west end. ***As a primary entry, this area should be improved with gateway features****, including signage, landscaping, unique pavement treatment, and more to strengthen the identity of the corridor. In addition, in the event that Boardman Lake Avenue is constructed, it will be a primary entry on the corridor's eastern end, and should also be improved with gateway features.*

In addition to the corridor's primary gateways, other intersections provide opportunities to help strengthen the corridor's identity and overall sense of place. ***The City should improve these non-gateway intersections with features that complement the primary gateways****, including landscaping and signage, but to a lesser extent.*

Most of the buildings along the corridor can be described as well kept, however few have been updated or modernized. The cumulative effect is a corridor that appears outdated. As an alternative to redevelopment, ***façade enhancements could "upgrade" the appearance of the corridor,*** *providing more contemporary looking buildings with attractive and welcoming entrances and storefronts.*

There are segments of Fourteenth Street where ***utilities, mechanical infrastructure, and service areas detract from the appearance of the Corridor****. These areas should be adequately screened with landscaping and fencing including rooftop mechanical equipment.*

The City should ***encourage new development to identify and protect viewsheds and vistas*** *onto Boardman Lake, Grand Traverse Commons, and other environmental assets by prohibiting overly intensive or massive development that blocks the viewpoint's subject.*

Parkway landscaping can visually unite a corridor and help establish a sense of place and identity. It can also play an important role in screening parking areas and reducing noise, light, dust, and glare from a roadway onto adjacent properties. ***The City should develop and implement a unified streetscaping treatment along the corridor*** *consisting of evenly spaced right-of-way trees, pedestrian scale lighting, shrubbery and hedges, flower beds, and other improvements that can help beautify and distinguish this important corridor.*

Many take pride in the fact that Traverse City is a walkable community. While subdivision regulations and City policy have been effective in establishing an extensive sidewalk network along Front Street, maintenance issues and gaps in the network do exist. ***The City should ensure a complete sidewalk network exists*** *along Front Street and ensure adjacent neighborhoods are also connected to the sidewalk network.*

In addition to sidewalk connections along Fourteenth Street, there are opportunities to ***connect to the Traverse Area Recreation and Transportation Trails' network (TART Trails).*** *Providing signage for the trail connections would assist in promoting the TART trail system, enhance the walkability and bikability of the community, and better connect the Fourteenth Street Corridor and its businesses to the trail system.*

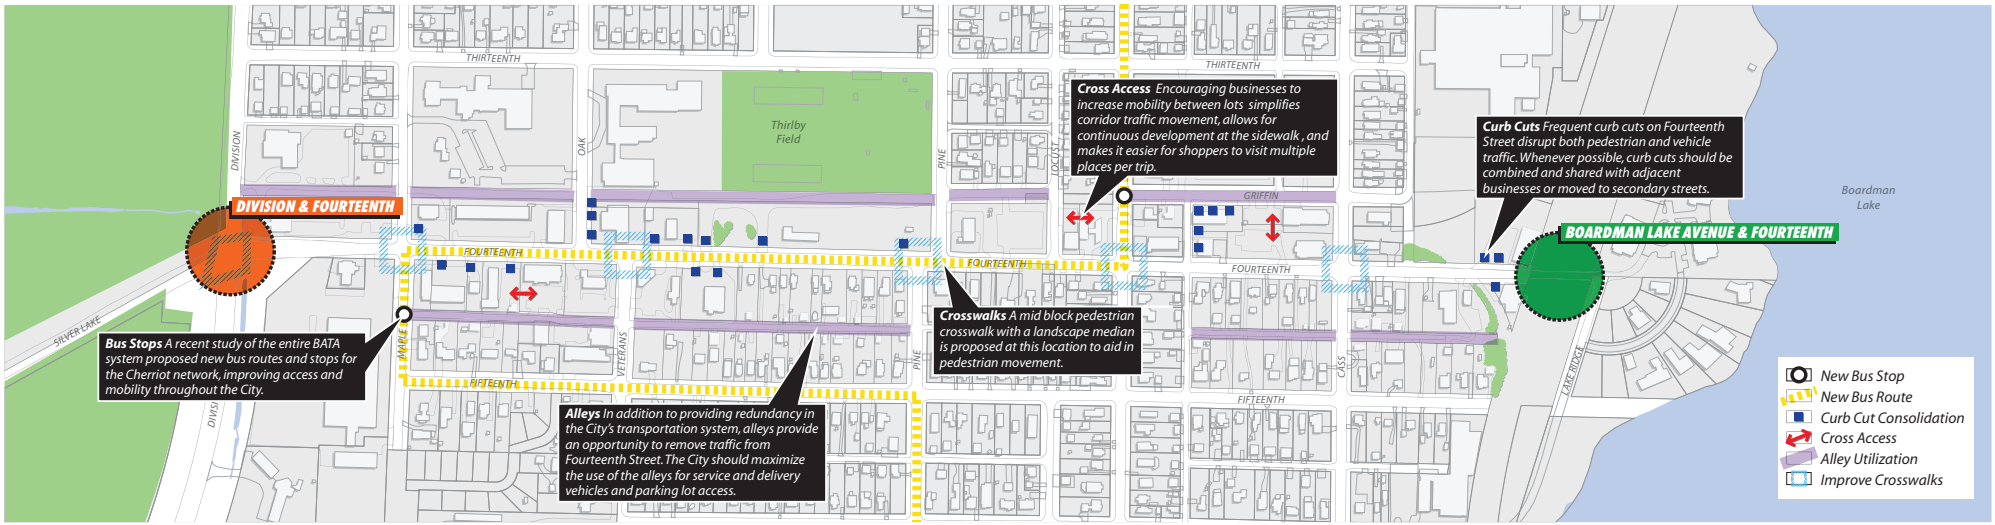
Strengthening and enhancing crosswalks throughout the Corridor *could improve the pedestrian orientation and safety of the Fourteenth Street. Primary crosswalks, designated for busier intersections, should be constructed with different materials and colors than the street, such as brick pavers or stamped and painted concrete, to enhance their visibility and improve the streetscape. Secondary crosswalks should use heavy striping to strengthen their presence.*

"Complete streets" prioritize safe and easy access for all modes of transportation, including vehicles, bicycles, pedestrians, and public transportation. Even small improvements such as providing ***street furniture can further enhance the pedestrian experience and make the Corridor more inviting.***

Wayfinding signage plays an important role in the branding, place making, function, and navigation of an area. ***A district identity and brand could be created for the Fourteenth Street Corridor and wayfinding could direct motorists and pedestrians*** *to key destinations along the Corridor and within the community. Wayfinding signage should be simple, quick and easy to understand, attractive, and contribute to the appearance and overall character of the Corridor.* ***Kiosks with maps and directories should be placed at key activity nodes within the Corridor,*** *and be easily visible to drivers and pedestrians.*

Trailheads and rest areas are important amenities that enhance the use of the entire trail system. The City should seek ***opportunities to install these amenities that may include providing information, parking, signs, restrooms, etc.*** *Trailheads should be prominent and should provide information about the trail and surrounding context.*

Residential uses on Fourteenth Street should have front yard fencing to delineate the public realm from private property, not privacy. ***Fencing that detracts from the corridor's appearance and stands in isolation should be removed.*** *In regard to Thirlby Field, fencing is necessary to control ticketed events, however the existing chain-link is unattractive.* ***It is recommended that the existing fencing around Thirlby Field be replaced with a more attractive metal fence which can secure the field and contribute to the area's character and appearance.***



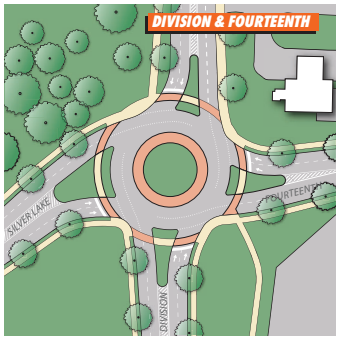
TRANSPORTATION FRAMEWORK PLAN

FOURTEENTH ST

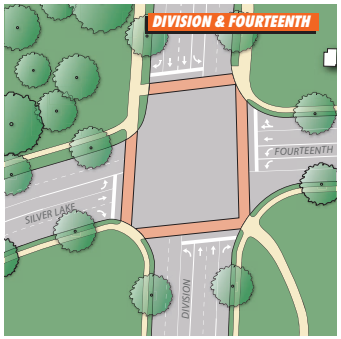
Safe and efficient transportation of vehicles, bicyclists, and pedestrians along the Fourteenth Street Corridor must be a priority for the City. However, given the existing right-of-way dimensions and lane configurations, adequately accommodating all modes of travel can be very challenging. Consideration must not only be given to vehicles and pedestrians traveling along the corridor, but must also coordinate with the parking and property access along the roadway in order to provide a functional and viable corridor for commerce and future development.

The key components of transportation are addressed in a manner geared toward enhanced mobility and safety for all modes of travel. Recommendations address access management, intersections, sidewalks, pedestrian comfort, ADA compliance, bicycle lanes, and more. Also, coordinated with transportation improvements, there must be beautification and urban design enhancements designed and implemented in a way that is integrated into circulation and access, rather than accommodated as an afterthought.

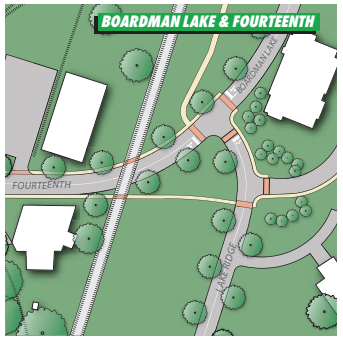
Note on Upgrade Signalized Intersections *Future traffic volumes and detailed traffic analysis would be needed to determine required lane configuration at intersections based on current peak hour counts.*



Division & Fourteenth *The City should give consideration to the installation of a two-lane roundabout at the intersection of Division and Fourteenth to improve access management and enhance intersection safety. Typically two-lane roundabouts are 140 to 160 feet in diameter, but the exact geometry would need to be determined by additional data collection and analysis. Updated data regarding traffic counts and projections will be required before a roundabout analysis (i.e. RODEL, roundabout traffic analysis software) analysis can be conducted.*



Division & Fourteenth *If a roundabout does not prove feasible, it is recommended that the City build upon the existing signal configuration of the intersection at Division and Fourteenth to include two left turn lanes, a through and a through-right lane for westbound traffic and a left turn, a through, and right turn lane for eastbound traffic. The eastbound, northbound and southbound configurations should incorporate an additional through-lane to support increasing traffic patterns.*



Boardman Lake & Fourteenth *It is recommended that Boardman Lake Avenue be extended to connect to Fourteenth to increase connectivity and relieve Cass as the north/south connector. A T-Intersection is recommended to accommodate Lake Ridge while still providing for an efficient flow of traffic from Boardman Lake Avenue to Fourteenth.*

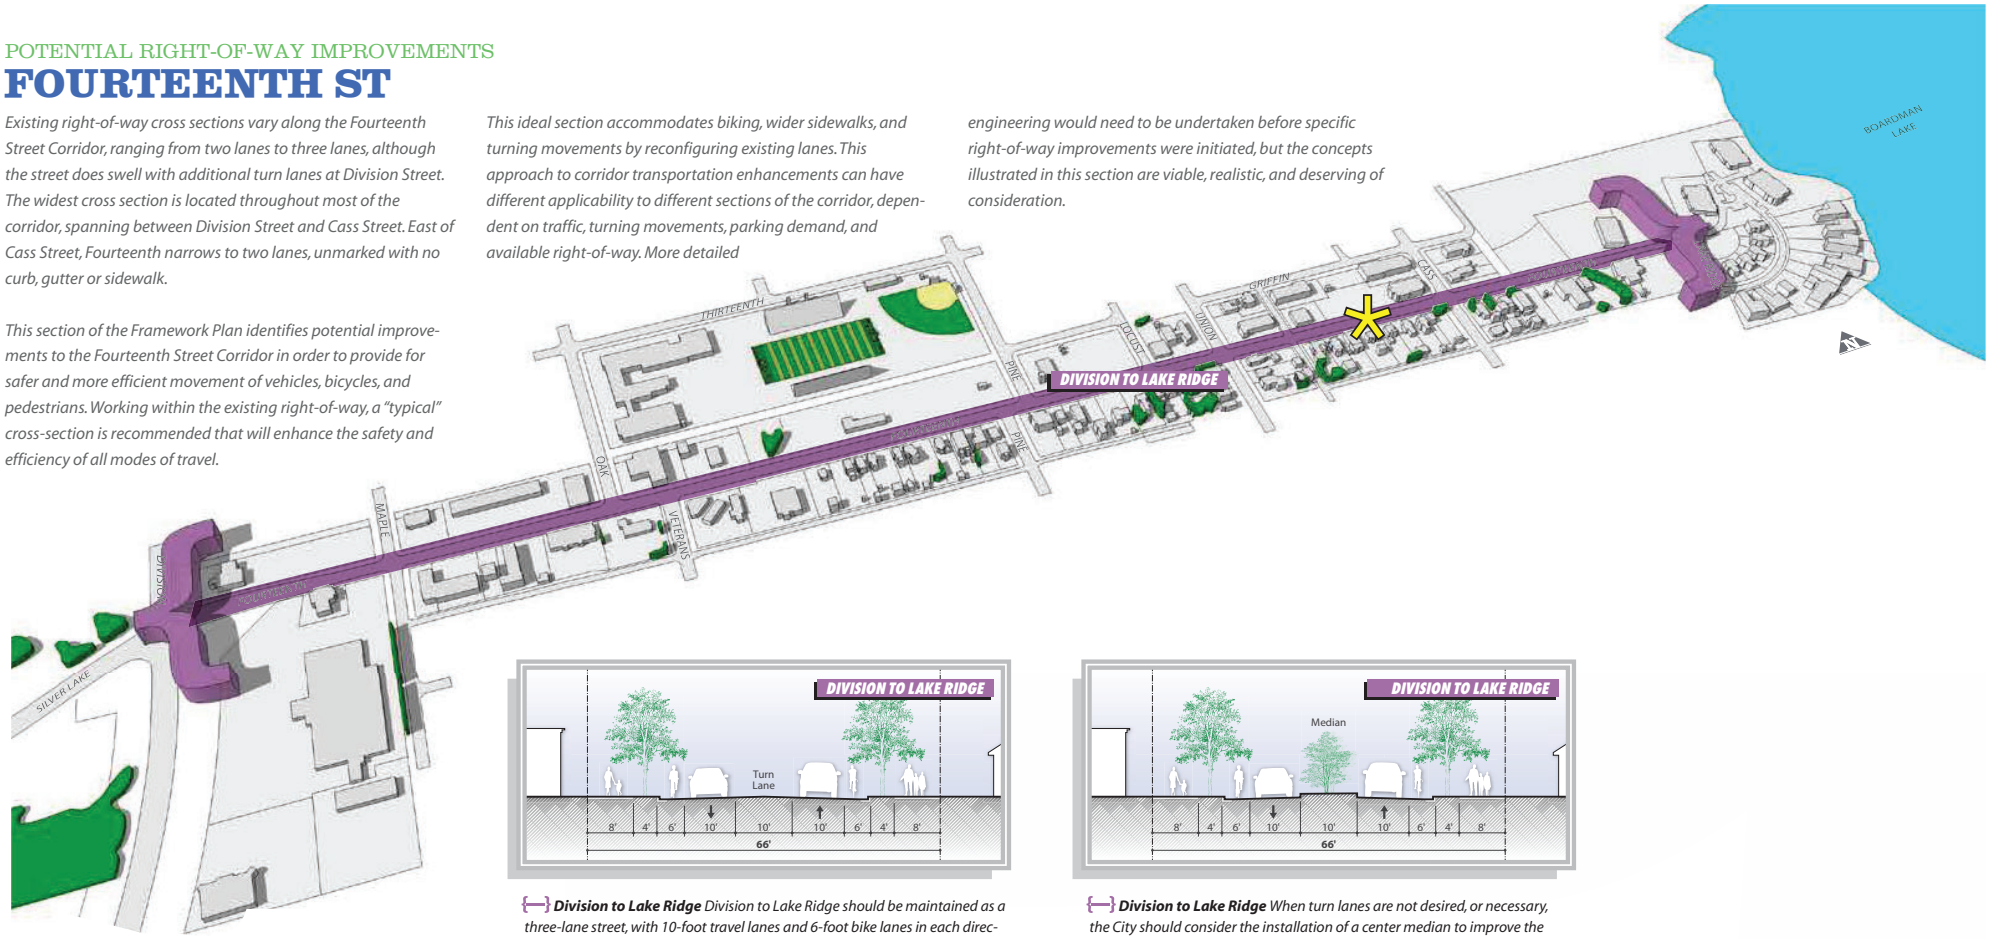
POTENTIAL RIGHT-OF-WAY IMPROVEMENTS

FOURTEENTH ST

Existing right-of-way cross sections vary along the Fourteenth Street Corridor, ranging from two lanes to three lanes, although the street does swell with additional turn lanes at Division Street. The widest cross section is located throughout most of the corridor, spanning between Division Street and Cass Street. East of Cass Street, Fourteenth narrows to two lanes, unmarked with no curb, gutter or sidewalk.

This section of the Framework Plan identifies potential improvements to the Fourteenth Street Corridor in order to provide for safer and more efficient movement of vehicles, bicycles, and pedestrians. Working within the existing right-of-way, a "typical" cross-section is recommended that will enhance the safety and efficiency of all modes of travel.

This ideal section accommodates biking, wider sidewalks, and turning movements by reconfiguring existing lanes. This approach to corridor transportation enhancements can have different applicability to different sections of the corridor, dependent on traffic, turning movements, parking demand, and available right-of-way. More detailed engineering would need to be undertaken before specific right-of-way improvements were initiated, but the concepts illustrated in this section are viable, realistic, and deserving of consideration.



Division to Lake Ridge *Division to Lake Ridge should be maintained as a three-lane street, with 10-foot travel lanes and 6-foot bike lanes in each direction, along with a 10-foot center turn lane. This cross-section also includes a 4-foot parkway for trees and streetscaping, along with a 8-foot sidewalk to provide a comfortable pedestrian environment. The existing pavement width along Fourteenth is 34 feet. The proposed pavement width is 42 feet requiring a widening to accommodate the recommended improvements.*

Division to Lake Ridge *When turn lanes are not desired, or necessary, the City should consider the installation of a center median to improve the aesthetics of the corridor and assist in calming traffic. Alternatively, the median could be eliminated in favor of wider parkways that could accommodate bus bays when necessary.*

PROJECT/PROGRAM NOMINATION FORM

Transit agency legal name: City of Traverse City

Agency contact person: Zach Cole

Proposed project: Seventh St. Mill and Pave

Local agency project rank: 2

Fiscal year funding is requested: 28-29 Proposed let date: Spring 2029

Major route:

Project limits: Division to Union

Length (in mi.): 0.53 ■ Project area map attached?

Project description: Mill the surface down to gravel, Install 24" water main, replace curbs, sidewalk, and ADA ramps. New Gravel and Pave

Project Conditions

PASER rating: 2 Remaining Service Life (RSL): 6-10 years

Is this project 100% preserve? ☐ Yes ■ No

Is this a preventative maintenance project? ☐ Yes ■ No

☐ Please attach a description of the preventative maintenance fix(es) since the last reconstruction. Describe the fix(es) and include the year the fix(es) was/were completed.

Does this project have a capacity change? ☐ Yes ■ No
If yes, please attach travel analysis in pdf format.

Traffic Volume (AADT): 4,400 Freight Traffic Volume (CAADT): 352

Estimated % Commercial Traffic: 8% On MTP Freight Route? ☐ Yes ■ No

Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route? ☐ Yes ■ No

Functional Class: Approved Major Collector Year of last improvement: 1998

Description of last improvement: Water main replacement, removed and replaced road, curb and gutter, sidewalks, and driveways. Division to Wadsworth.

Funding

Federal Non-Participating Work?

☐ Yes ☐ No

Advance Construction Funding?

☐ Yes ■ No

If yes to either question, please explain: Installation of a 24" watermain from Division to Union St. as a part of the City Water Reliability Study.

If you have a preferred funding source, check box: ■ STP ☐ CMAQ

Proposed Participating Cost	$ 1,068,115	Proposed Federal	$ 1,100,00
Proposed Non-Participating Cost	$ 1,416,010	Proposed State	$
Total Project Cost	$ 2,484,125	Proposed Local	$

Planning

Project Listed in the TTCI Metropolitan Transportation Plan (MTP)? ☐ Yes ☐ No ■ N/A

Project Identified in Local Plan? ■ Yes ☐ No (If "Yes," please attach pages from plan)

Project Conforms to Complete Streets Policy? ■ Yes ☐ No ☐ N/A

Describe existing and future non-motorized facilities within the project limits/additional comments/exception rational:

Curb zone for bike facilities. Description attached.

Project located in Environmental Justice Area? ■ Yes ☐ No

If yes, please include the MiEJ Environmental Justic Score: >30-40

Please attach a map/screenshot from MiEJScreen Mapping Tool

Safety

Number of crashes per MVMT/MEV: 1

Does the project fix the identified correctable safety issues? ☐ Yes ■ No

Describe how the project fixes identified correctable safety issues:

Follows complete streets resolution Dated Oct 3, 2011, reduced crossing widths, new paint markings, and bike lanes. Proposed street schematic attached.

Assessment

If the answer is "Yes" to any of the following criteria, provide additional explanation in an attachment. Please consider the following factors when completing the work description:

Regional Benefit – Is there a benefit beyond the project to the area wide transportation system or region?	■ Yes ☐ No
Connectivity – Does the project add or enhance a road connection between two or more existing roadways functionally classified as a Major Collector or higher; OR add or enhance connections between two or more pathway corridors or transit routes?	■ Yes ☐ No
Environmental Justice – Is the project located within an identified EJ area and are no adverse impacts projected?	■ Yes ☐ No
Complete Streets – Does the project contain enhancements to serve pedestrians, cyclists, and/or transit users?	■ Yes ☐ No
Transit – Will the project improve service, efficiency, and attractiveness of public transit?	■ Yes ☐ No
Green Infrastructure – Does the project involve the use of stormwater best management practices?	■ Yes ☐ No
Environment – Does the project contain elements to preserve, mitigate, or enhance an environmentally sensitive area?	■ Yes ☐ No
Economic Development – Does the project support job creation or growth?	■ Yes ☐ No
Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route?	☐ Yes ■ No
Safety – Can the project be shown to do one or more of the following: reduce fatalities and serious injuries; reduce nonmotorized crashes; enhance transit safety?	■ Yes ☐ No

Narrative

Please attach a narrative for the project and be certain to address the following specific issues:

Local Municipality Infrastructure Coordination: May include projects that cross jurisdictional boundaries, utilize grant funding that must be expended within a limited time-frame, bridge construction or culvert maintenance or replacement, projects being undertaken by public transit agencies or port authorities, rail or freight authorities, non-motorized projects, or projects that may be built concurrently with public utility projects.

Local Planning & Economic Development: Includes projects that are in local or regional plans (such as a Master Plan or other community development related plan) and has a significant impact on the local or regional economy. This may include areas with planned future land uses such that would increase density and traffic volume (high-density commercial, residential, or mixed-use developments).

Additional Information for consideration (if applicable):

- Current number of lanes
- Proposed number of lanes
- Current lane width
- Proposed lane width
- Total crashes on segment in last 3 years
- Drainage problem corrected?
- Replace/new bridge or culvert as part of project?
- Project benefits other modes (wide shoulders, separated nonmotorized facility done as part of project, correct hazardous intersection)

Acronyms/Definitions

AADT (Annual Average Daily Traffic) – Traffic metric that represents the average number of vehicles passing a specific point on a roadway per day over the course of a year.

CAADT (Commercial Annual Average Daily Traffic) – Traffic measurement that specifically tracks the average number of commercial vehicles such as trucks, buses, and delivery vehicles passing a certain point on a roadway per day over the course of a year.

MEV (Million Entering Vehicle) – Quantity of vehicles entering a specific point, location, or area over a given year, expressed in millions.

MiEJ Screen – A mapping tool developed by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) to identify and visualize areas in Michigan facing environmental justice concerns.

MTP (Metropolitan Transportation Plan) – A long-term, strategic document developed by a MPO to guide transportation investments and policies in a metropolitan region over a 20-25 year horizon.

MVMT (Million Vehicle Miles Traveled) – A common way to measure exposure in traffic safety. Crash rates are often expressed as crashes per million vehicle miles traveled.

RSL (Remaining Service Life) – Measure used to estimate the amount of time a roadway, bridge, or other infrastructure component will continue to perform its intended function before requiring significant rehabilitation, reconstruction, or replacement.

Seventh Street

- Regional benefit: Seventh Street serves as a westbound one-way major collector between Division and Union Streets (along with a paired one eastbound one-way major collector on Eighth Street). Improving this section of Seventh Street is important to the area as this is the only signalized connection between the City's west of Division and east of Division neighborhoods except for the congested Front and Division intersection. This is also a primary access point to the region's largest employer, Munson Medical Center and serves Central Grade School.

- Connectivity: The Seventh Street improvement project allows for enhanced cross-town connection along a designated bike route. This section of Seventh Street was identified as being a "higher stress" route for cyclists in the Mobility Action Plan.

- Complete Streets: The project will include designated pedestrian and bicycle infrastructure in addition to the improved vehicle travel lanes. All crossings will include accessible ramps.

- Transit: This improvement project limits includes a BATA transit stop at 7th and Union Streets. This is part of BATA's Route 1 providing north-south service from Grand Traverse Mall to the Hall Street Transfer Station allowing for access to the larger transit system. Having improved pedestrian access along Seventh Street to this stop will improve access to transit for many current and potential future transit users.

- Green Infrastructure: This road improvement project includes green infrastructure elements as necessary to improve the storm water controls for this area. These may include dry wells, leaching basins and bioswales in appropriate locations.

- Environment: The proposed green infrastructure elements of this project will improve the stormwater infrastructure for this area.

- Economic Development: Public infrastructure improvements along 7th Street will improve the safety for vehicular traffic as well as nonmotorized travelers. Enhanced access and improved safety for all users will benefit the businesses at either end of the corridor.

- Freight: NA

- Safety: More narrow travel lanes (reducing vehicle travel speeds), designated pedestrian and bike travel zones and improved pedestrian crossings will undoubtedly improve safety throughout this project area.

Local Municipality Infrastructure Coordination Narrative

The City's newly adopted Mobility Action Plan (MAP) calls for this section of 7th Street from Division to Union to continue to be part of the proposed "Vision Bike Network". Again, this part of Seventh Street was identified as being a "higher stress" route for cyclists yet this is a major route for east-west connections. This final design will provide for more comfortable, less stressful, conditions for bicyclists. Since this is a route used by many families in the neighborhood to get children to Central Grade School, coordination with TCAPS on the specific design that will accommodate all users is important to a successful outcome. These conversations have begun between the City and TCAPS.

Local Planning and Economic Development Narrative

The City's Street Design Manual has become the City's guide to identifying the context-sensitive design for the several identified street typologies. Seventh Street is identified as a Connector Street in the Manual. This street typology calls for 10-11' travel lanes and a 5-8' bike lane where bike lanes are present. Following additional input from residents and institutions such as TCAPS, either one-way or two-way bike lanes will be included throughout the corridor and a 10-foot travel lane consistent with the Manual.

All of the City's plans (MAP, Corridors Master Plan, Street Design Manual) are coordinated to enhance the complete transportation network. These plans were also designed to best serve the City's economic drivers. Specifically, for this 7th Street project area, the economic drivers include: (1) the residents and residential areas surrounding the 7th Street project area, (2) institutions, including TCAPS and Munson Medical Center both directly impacted by the 7th Street corridor, and (3) commercial services at both the east and west ends of the project area that serve the greater region. By thoughtfully improving significant multi-user routes such as 7th Street consistent with these plans, the City is effectively supporting all three of these economic drivers that in turn support the area's economy.

STREET TYPES

STREET TYPES WHAT DOES IT MEAN?

STREET CLASSIFICATION

This design manual outlines the overall city street design requirements for Traverse City streets and describes street functionality by the type of street in order to best meet the needs of current and future development in the city.

Traditional street classifications are based on the Federal Functional Class system that categorizes streets as "arterial," "collector," and "local." These classifications are primarily based on traffic conditions and operational characteristics.

While Traverse City streets may function like traditional streets, their history, location, context, use, and purpose vary from the traditional model. To better accommodate these differences and design streets that will better serve the residents of Traverse City, a new system of street typologies was created.

NEW STREET TYPES

The new system of city street typologies created for Traverse City is illustrated in the map on the following page and includes the street types listed below:

- Downtown Street
- Commercial Corridor
- Connector Street
- Formal Residential Street
- Informal Residential Street
- Park Lane Street
- Private Street
- Industrial Street
- Alleys
- Shared Street

These new city street types are described in further detail on the following pages, including their associated contexts, functions, and desired composition. The illustrations that accompany each street type are representative of those elements that make up the specific typology, and include ranges for appropriate dimensions of relevant street design features.

These dimensions represent the preferred standards for those design features, but may not be feasible in all situations. Engineering judgement may be required to adjust design dimensions to fit within the constraints of existing street conditions. The default design, however, is for a complete street that addresses the needs of the pedestrians first before designing other users for the street.

Typically street rights-of-way are 66 feet wide. The right-of-way typically includes travel lanes, sidewalks, street trees and public utilities. Alley rights-of-way are typically 33 feet wide.

STATE HIGHWAYS

State Highways are designed, managed, and maintained by MDOT and are subject to Federal and State highway design standards.

The State and Federal highways that travel through the city are US 31, M-72, and M-37 and are mainly the connector and commuter routes into and out of the city. US 31 has several distinct designations. US 31 is listed in the National Highway Systems, is a State Corridor of Significance, is a national truck route, and is classified as a principal arterial highway.

Preferred Standard	5-8'	6-10'	5-7'	10-11'	10-11'	5-7'	6-10'	5-8'

52-72'

NOTE:

1. Curb zone can include bike facilities, parking, loading, etc. On-street parking areas in the curb zone may include permeable pavers for stormwater filtration.
2. Row is typically 66 feet wide.
3. No on-street parallel parking unless curb zone is at least 7 feet wide.

Connector Street

CONTEXT

Connector Streets serve areas of moderate-density residential or transition zones between residential and commercial. These areas intended to have a more neighborhood-focused development style, with community facilities and neighborhood commercial amenities.

FUNCTION

These streets serve as transit corridors and as key bicycle connections, linking residents to jobs, services and amenities. These streets provide access to residential, commercial, and mixed use areas and provide a connection to the rest of the community.

COMPOSITION

Connector streets are typically limited to two lanes and may be delineated with striping. Sidewalks are provided on both sides of the street and are detached from the curb to allow for an adequate tree lawn with street trees. On-street parking or protected bike lanes may be present, depending on the adjacent land uses and right-of-way constraints. Traffic calming measures are appropriate for the streets provided the types of measures will not hamper emergency operations.

Pedestrian scaled street lighting is present to delineate character transitions and at intersections, If alternative access is available via alleys, minor streets, or shared access through neighboring properties, driveways are not allowed for new construction or major property renovation.

These streets are to be designed and constructed with curb and gutter. Drainage is properly to be accounted for by using green infrastructure and best management practices. Utilities are provided within the right of way.

Example Connector Street - Eastern Avenue

Example Connector Street - West Front Street

Planning

Project Listed in the TTCI Metropolitan Transportation Plan (MTP)? ☐ Yes ☐ No ☐ N/A

Project Identified in Local Plan? ☐ Yes ☐ No (If "Yes," please attach pages from plan)

Project Conforms to Complete Streets Policy? ☐ Yes ☐ No ☐ N/A

Describe existing and future non-motorized facilities within the project limits/additional comments/exception rational:

NA

Project located in Environmental Justice Area? ☐ Yes ☐ No

If yes, please include the MiEJ Environmental Justic Score: _____

Please attach a map/screenshot from MiEJScreen Mapping Tool

Safety

Number of crashes per MVMT/MEV: NA

Does the project fix the identified correctable safety issues? ☐ Yes ☐ No

Describe how the project fixes identified correctable safety issues:

NA

Assessment

If the answer is "Yes" to any of the following criteria, provide additional explanation in an attachment. Please consider the following factors when completing the work description:

Regional Benefit – Is there a benefit beyond the project to the area wide transportation system or region?	■ Yes ☐ No
Connectivity – Does the project add or enhance a road connection between two or more existing roadways functionally classified as a Major Collector or higher; OR add or enhance connections between two or more pathway corridors or transit routes?	■ Yes ☐ No
Environmental Justice – Is the project located within an identified EJ area and are no adverse impacts projected?	☐ Yes ☐ No
Complete Streets – Does the project contain enhancements to serve pedestrians, cyclists, and/or transit users?	■ Yes ☐ No
Transit – Will the project improve service, efficiency, and attractiveness of public transit?	■ Yes ☐ No
Green Infrastructure – Does the project involve the use of stormwater best management practices?	☐ Yes ☐ No
Environment – Does the project contain elements to preserve, mitigate, or enhance an environmentally sensitive area?	■ Yes ☐ No
Economic Development – Does the project support job creation or growth?	■ Yes ☐ No
Freight – Will the project will reduce congestion or improve reliability on roadways identified as a freight route?	■ Yes ☐ No
Safety – Can the project be shown to do one or more of the following: reduce fatalities and serious injuries; reduce nonmotorized crashes; enhance transit safety?	■ Yes ☐ No

Traverse Transportation Coordinating Initiative

TTCI

Memorandum

Networks Northwest
Talent / Business / Community

DATE: January 21, 2025

TO: Traverse Transportation Coordinating Initiative Technical Committee

FROM: Isha Pithwa, Transportation Planner

SUBJECT: FY2026-2029 RTF Project Review

Purpose and Background:

This memorandum provides an overview of the FY2026-2029 RTF projects that require review and recommendation from the TTCI Technical Committee for inclusion in the MPO TIP Call for Projects (CFP). As part of the required planning process, all projects approved by the Rural Task Force (RTF) that fall within the MPO boundary must also be reviewed and approved by the MPO to ensure alignment with MPO policies and planning documents.

Within RTF 10-C, Grand Traverse County Road Commission, Leelanau County Road Commission, and the Bay Area Transportation Authority (BATA) have submitted projects that were reviewed and approved as part of the FY2026-2029 RTF Call for Projects timeline. These projects are now presented for MPO review and inclusion in the TTCI TIP CFP.

The TTCI follows the practice of reviewing and approving all transportation projects falling within its boundary, including those originating from RTFs, local agencies, etc.

Summary of Projects:

The attached project forms include submissions from Grand Traverse County, Leelanau County, and BATA. These projects were reviewed and approved by RTF 10-C in alignment with its established criteria.

Action Requested:

The TTCI Technical Committee is requested to:

- Review the attached FY2026-2029 RTF project forms.
- Discuss and address any questions or concerns regarding the projects.
- Provide a recommendation to the TTCI Policy Board for approval of these projects for inclusion in the MPO TIP Call for Projects.

Next Steps:

Following the Technical Committee's recommendation, the TTCI Policy Board will review the projects for final approval and inclusion in the MPO FY2026-2029 TIP.
